Shatin, Hong Kong.

Attention: Mr YEUNG H. M. Simon

Dear Mr YEUNG,

Re: Contract No. SPW 08/2020
Independent Environmental Checker for
Construction of Yuen Long Effluent Polishing Plant Stage 1

Verification of the First Monthly EM&A Report (April 2021)

Reference is made to the First Monthly EM&A Report by the ET ref. Fugro Document No. 0120/20/ED/0330, Issue No. 03 and dated 14 May 2021 (the Report).

We have no adverse comment on the Report and herewith verify that the Report has conformed to Conditions 3.4 and 3.5 of the Environmental Permit No. EP-565/2019. The ET Leader is also reminded that it is the ET's responsibility to ensure the reported information be true, valid and correct as per Condition 3.6 of EP-565/2019.

Please contact the undersigned (Tel. 3465 2805) or our Mr. Y.H. Hui (Tel. 3465 2850) should you have any questions on the matter.

Yours sincerely,

For and on behalf of
Ramboll Hong Kong Limited

Wong Fu Nam
Independent Environmental Checker

c.c.

DSD	Mr LAM Yu Wang
Fugro	Mr David Hung

IEC Comments

Items	**Comments**	**Responses**
1	Crossing checking with the provided data file indicate ET appeared excluded certain habitat types in the data analysis under the heading of All Avifauna Species. The ET shall carefully check their calculation and reporting.	All species observed included.
2	Section 1.1.5 and RtC #6 – The previous comments not addressed. Please review and amended as appropriate as the EM&A works and EM&A programme is not only carried by the Contractor.	Amended.
3	Section 5.2.3 – Please rectify "in Sections 5.2.3.1Error! Reference source not found."	Amended.
4	Section 5.2.3.1, 1st paragraph – The total abundance should be discussed first before discussion of those on wetland habitat. It is better to move put the discussion about those on wetland habitat under Section 5.2.3.3.	1st paragraph moved to Section 5.2.3.3.
5	Section 5.2.3.1.1, 1st paragraph - Masked Laughingthrush *Garrulax perspicillatus* has 24 recorded individuals and shall be included before Spotted Dove.	Inserted.
6	Section 5.2.3.1.1, 3rd paragraph – Table 5.5 and data in Appendix F indicate 228 individuals recorded under Transect method. Please check.	Checked and revised.
7	Section 5.2.3.1.1, 3rd paragraph – Appendix F indicates Chinese Pond Heron - *Ardeola bacchus* has 45 recorded individuals. Please check the species listing and numbers.	Revised species listing and numbers.
8	Section 5.2.3.1.2, 3rd paragraph – Table 5.5 and data in Appendix F indicate 70 individuals recorded under Transect method. Please check.	Checked and revised.

Items	Comments	Responses
9	Section 5.2.3.1.2, 3rd paragraph – Appendix F indicates Chinese Pond Heron - *Ardeola bacchus* has 45 recorded individuals. Please check the species listing and numbers.	Checked and revised.
10	Section 5.2.3.2 – Please also state the total number of avifauna species recorded before those on the wetland habitats.	Stated.
11	Section 5.2.3.2.1 and Appendix F – Please check and ensure all species recorded under the respective survey methods are included, not just those on wetland habitat.	Noted and checked.
12	Section 5.2.3.2.2, 3r paragraph – Appendix F reported 6 species of conservation interested under the transect method. Please check.	Seven species if conservation importance were noted.
13	Section 5.2.3.4, Table. 5.12 and RtC #21– The time of noise level recording still has not been stated.	Checked. Time now stated.
14	RtC #26– The result is presented in the Appendix F, not Appendix E. Please amend.	Results are provided in Appendix F.
15	Appendix F, Ecological Bird Survey Monitoring Results – Please give all tables an appropriate table number.	All tables given table numbers.
16	Appendix F, Ecological Bird Survey Monitoring Results (14 April 2021) – Please clarify "mudflat" and "mangrove" under "Transect/Point Count" column and amend as necessary.	Removed from Transect/Point Count column. Amended.
17	Appendix F, Ecological Bird Survey Monitoring Diversity in All Wetland Habitats (14 April 2021), Point Count- All Avifauna Species - Please check and ensure all the species recorded are included in the calculation as appropriate. It appeared the ET only included those on wetland habitats in the calculation and this is not in accordance with the AL/LL table. Please also check and ensure the other tables are correct.	Recalculated to include all species recorded.

EXECUTIVE SUMMARY

i. This Monthly Environmental Monitoring and Audit (EM&A) Report is prepared for Contract No. SPW 07/2020 "Environmental Team for Construction of Yuen Long Effluent Polishing Plant Stage 1". Drainage Services Department (DSD) has appointed Fugro Technical Services Limited (FTS) to undertake the Environmental Team services for the project and implement the EM&A works.

ii. This is the 1st Monthly EM&A Report for the Contract which summaries findings of the EM&A programme during the reporting period from 8 April 2021 to 30 April 2021. As informed by the Contractor, major activities in the reporting month were:

- Overhaul of Detritor;
- Overhaul of Primary Sedimentation Tank and Final Sedimentation Tank;
- Overhaul of Sludge Holding Tank and Sludge Digestion Tank;
- Pre-drill work by 4 drill rig;
- Installation of instrumentation;
- Site formation work at IW within piling area;
- Site formation works at temporary storage area, admin. Building & work shop;
- Erection of noise barrier;
- Erection of bird curtain; and
- Trial pit for zone 1 diversion work & pre-drill work.

Breaches of Action and Limit Levels

iii. No Action and Limit Level exceedance was recorded for air quality monitoring and construction noise monitoring in the reporting month.

iv. An Action Level exceedance was recorded for water quality in the reporting month. The exceedance was recorded at M3 on 13 April 2021. It was found that this exceedance is not project related.

v. No Action / Limit exceedance was recorded for noise levels at stations (NMS1 and NMS2) in close proximity to the active ardeid night roosts.

vi. Action and Limit levels for the ecological bird monitoring were not computed due to insufficient data for comparison. Due to the safety concern encountered during the night-time survey, the monitoring activity was stopped because of the potential attacks by the village dogs. Night-time survey activity was suspended to avoid further safety incident. Safety issues shall be addressed, specifically coordinating with and requesting the dog owners to keep their dogs within their premises during the duration of the night-time survey. In connection to this, continued coordination with the dog owners and/or village representative is currently being undertaken to ensure that the dogs be kept within their owners' premises during the monthly ecological survey period; and/or engage dog owners or local villagers (each from Fung Lok Wai and Nam Sang Wai) to accompany the team during the monitoring activities.

Complaint Log

vii. No complaints were received in the reporting period.

Notifications of any Summons and Successful Prosecutions

viii. No notifications of summons and prosecutions were received in the reporting period.

Reporting Change

ix. There were no reporting changes during the reporting month.

Future Key Issues

x. The main works will be anticipated in the next three months are as follow:

- Trial pits excavation;
- Pre-drilling works;
- Temporary Sewerage/Sludge diversion -Zone 1 & 2;
- Demolition of PST no. 7 & 8;
- Piling works;
- Construction of Temporary Admin. Building, Workshop, Temporary Storage Facility and MIC office; and
- Overhaul works of A-tank, Sludge Holding Tank, FST, PST and Sludge Digestion Tanks.

Appendices

1. INTRODUCTION

1.1 Background

1.1.1 The existing Yuen Long Sewage Treatment Works (YLSTW) is a secondary sewage treatment works, located at Yuen Long Industrial Estate serves Yuen Long Town, Yuen Long Industrial Estate and Kam Tin areas with a design capacity of 70,000 m^3 per day. Based on the latest planning data, the volume of sewage generation from the YLSTW catchment is estimated to increase to 150,000 m^3 per day after 20 years. In addition, since YLSTW has been operating for over 30 years and most of its facilities are of out-dated design and reaching the end of their design life, the environmental facilities of the plant will also be upgraded and hence improving the adjacent environment through upgrading the YLSTW to Yuen Long Effluent Polishing Plant (YLEPP). The layout for construction of Yuen Long Effluent Polishing Plant (hereinafter referred as "the Project") is given in **Figure 1**.

1.1.2 YLSTW will be reconstructed in two stages to increase its capacity to 150,000 m^3 per day. The proposed works, as Stage 1 of the project, will firstly increase the treatment capacity to 100,000 m^3 per day. In the course of Stage 1 construction, about half of the existing facilities of YLSTW would be demolished, while the other half would be kept in operation to maintain the sewage treatment service for Yuen Long area.

1.1.3 The Project is a designated project under Schedule 2 of the Environmental Impact Assessment Ordinance (EIAO) (Cap. 499) for which Environmental Impact Assessment (EIA) report and Environmental Monitoring and Audit (EM&A) Manual was approved by EPD (Register No.: AEIAR-220/2019) on 25 April 2019. The Environmental Permit (EP) (EP No. EP-565/2019) was issued by EPD on 26 April 2019.

1.1.4 Fugro Technical Services Limited (FTS) has been appointed as the Environmental Team (ET) by Drainage Services Department (DSD) to undertake the Environmental Team services for the Project and implement the EM&A works under the Contract No. DC/2019/10 Yuen Long Effluent Polishing Plant -Main Works for Stage 1 (hereinafter referred as "the Contract").

1.1.5 This is the 1st Monthly EM&A report to document the findings of site inspection activities and EM&A programme for this project from 8 April 2021 to 30 April 2021 (reporting period) and is submitted to fulfil Condition 3.4 of the EP and Section 12.4.1 of the EM&A Manual.

1.2 Project Organization

1.2.1 The Project Organization structure is shown in **Appendix B**. The key personnel contact names and numbers are summarized in **Table 1.1**.

Table 1.1 – Contact Information of Key Personnel

Party	Position	Name	Telephone
Project Proponent (Drainage Services Department)	Engineer	Mr. Lam Yu Wang	2594 7473
Engineer's Representative (AECOM Asia Co. Ltd.)	Chief Resident Engineer	Mr. Simon Yeung	9075 7172
	Senior Resident Engineer	Mr. Patrick Leung	6124 8838
Independent Environmental Checker (Ramboll Hong Kong Limited)	Independent Environmental Checker (IEC)	Mr. F.N. Wong	3465 2805
Contractor (Paul Y. CREC Joint Venture)	Environmental Officer	Ms. Iris Ho	5611 8325
Environmental Team (Fugro Technical Services Limited)	Environmental Team Leader (ETL)	Mr. David Hung	3565 4371

1.3 Construction Programme and Activities

1.3.1 The site layout plan of the Contract is shown in **Figure 1**.

1.3.2 The construction programme of this Contract is shown in **Appendix A**.

1.4 Works undertaken during the month

1.4.1 The main construction works carried out in the reporting period were as follow:

- Overhaul of Detritor;
- Overhaul of Primary Sedimentation Tank and Final Sedimentation Tank;
- Overhaul of Sludge Holding Tank and Sludge Digestion Tank;
- Pre-drill work by 4 drill rig;
- Installation of instrumentation;
- Site formation work at IW within piling area;
- Site formation works at temporary storage area, admin. Building & work shop;
- Erection of noise barrier;
- Erection of bird curtain; and
- Trial pit for zone 1 diversion work & pre-drill work.

1.4.2 The environmental protection and mitigation measures corresponding to the main construction works implemented in the reporting period can be referred to **Appendix J**.

1.5 Status of Environmental Licences, Notification and Permits

1.5.1 A summary of the relevant permits, licenses and/or notifications on environmental protection for this Contract is presented in **Table 1.2**.

Table 1.2 – Environmental Licenses, Notification and Permits Summary

Permit/ Notification/ License	Reference No	Valid From	Valid Till
Environmental Permit	EP-565/2019	26-Apr-2019	NA
Notification of Works under APCO	461616	6-Nov-2020	NA
Construction Waste Disposal Billing Account	7038933	20-Nov-2020	NA
Registration as Chemical Waste Producer under WDO	WPN5213-528-P2796-03	4-Feb-2021	NA
Construction Noise Permit	GW-RN0005-21	4-Jan-2021	17-Apr-2021

Construction Noise Permit (Percussive Pilling)	PP-RN0007-21	26 Feb 2021	30 Apr 2021
Construction Noise Permit (Percussive Pilling)	PP-RN0021-21	27 Apr 2021	30 Jun 2021
Admission Ticket for Disposal of Special Waste at Landfill	Admission Ticket No. 16121	26 Feb 2021	25 Aug 2021

2. AIR QUALITY

2.1 Monitoring Requirement

2.1.1 In accordance with the EM&A Manual, 1-hour Total Suspended Particulates (TSP) levels should be measured at the designated air quality monitoring stations to indicate the impacts of construction dust on air quality. Impact 1-hour TSP monitoring was conducted for at least three times every 6 days.

2.2 Monitoring Equipment

2.2.1 A portable direct reading dust meter was used to carry out the 1-hour TSP monitoring at the designated monitoring stations.

2.2.2 The model of the air quality monitoring equipment used is summarized in **Table 2.1**.

Table 2.1 – Air Quality Monitoring Equipment

Item	Location	Brand	Model	Equipment	Serial No.
1	AM1	Sibata	Model LD-5R	Sibata Portable TSP Monitors	761105
2	AM2		Model LD-5R		882149
3		Global Water	GL500-7-2	Wind Station	WS-02

2.3 Monitoring Methodology for Direct Reading Dust Meter

2.3.1 Portable Laser Particle Photometer Monitors (Sibata Model LD-3B / 5R) complete with appropriate sampling inlets are employed for 1-hour TSP measurement.

Measuring Procedures

a) Pulling up the air sampling inlet cover
b) Changing the Mode 0 to BG
c) Pressing Start/Stop switch
d) Turning the knob to SENSI.ADJ and press it
e) Pressing Start/Stop switch again
f) Returning the knob to the position MEASURE slowly
g) Pressing the timer set switch to set measuring time
h) Removing the cap and start the measurement

Equipment Calibration

1-hour dust meter should be calibrated at 1 year intervals. The calibration certificates are presented in **Appendix D**.

2.4 Maintenance and Calibration for Direct Reading Dust Meter

2.4.1 ET shall submit sufficient information to the IEC to prove that the instrument is capable of achieving comparable results to the HVS. The instrument should also be calibrated regularly, and the 1-hour sampling shall be determined periodically by the HVS to check the validity and accuracy of the results measured by direct reading method. The calibration certificate for the direct reading dust meter is provided in **Appendix D**.

2.5 Monitoring Locations

2.5.1 In accordance with the EM&A Manual, two air quality monitoring locations, namely AM1, AM2 are covered under Contract No. SPW 07/2020 "Environmental Team for Construction of Yuen Long Effluent Polishing Plant Stage 1".

2.5.2 The most updated locations are summarized in **Table 2.2** and the locations of the air monitoring stations shown in **Figure 2**.

Table 2.2 – Air Quality Monitoring Location

Monitoring Station	Location
AM1	Topfine Machinery (China) Co. Ltd
AM2	Squatter house at the west of Yuen Long STW

2.6 Monitoring Results

2.6.1 The schedule of air quality monitoring in reporting month is provided in **Appendix E**.

2.6.2 No Action / Limit Level exceedance was recorded for 1-hr TSP at AM1 and AM2.

2.6.3 No effect that arose from the other factors was noted during the current monitoring month.

2.6.4 The weather conditions during the monitoring are provided in **Appendix K**.

2.6.5 The monitoring data of 1-hr TSP are summarized in **Table 2.3**. Detailed monitoring data are presented in **Appendix F**.

Table 2.3 – Summary of Air Quality Monitoring Results

Monitoring Station	Average ($\mu g/m^3$)	Range ($\mu g/ m^3$)	Action Level ($\mu g/ m^3$)	Limit Level ($\mu g/ m^3$)
1-hour TSP				
AM1	48	26-71	291	500
AM2	51	29-86	296	

2.6.6 The Action and Limit Levels for air quality monitoring have been set and are presented in **Appendix C**.

2.6.7 The Event and Action Plan for air quality is given in **Appendix H**.

2.6.8 The wind data obtained from the on-site wind station during the reporting period is provided in **Appendix G**.

2.7 Comparison of 1-hr TSP Monitoring Results with EIA Predictions

2.7.1 The monitoring data of 1-hr TSP was compared with the EIA predictions as summarized in **Table 2.4**.

Table 2.4 – Comparison of 1-hr TSP data with EIA predictions

Monitoring Station	EIA ID	Predicted Maximum Hourly Average TSP Concentration (µg/ m^3)	Maximum 1-hr TSP Monitoring Results In April (µg/ m^3)
1-hour TSP			
AM1	ASR09	205-451	71
AM2	ASR11		86

Notes:
Predicted TSP Concentration extracted from Table 3.20 of EIA Report, AEIAR-220/2019

2.7.2 The 1-hr TSP monitoring results at AM1 and AM2 were below the Predicted Maximum Hourly Average TSP Concentration in the approved Environmental Impact Assessment (EIA) Report.

3. NOISE

3.1 Monitoring Requirement

3.1.1 In accordance with the EM&A Manuals, L_{eq} (30min) monitoring is conducted for at least once a week during the construction phase between 0700 and 1900 on normal weekdays at the designated monitoring locations.

3.2 Monitoring Equipment

3.2.1 As referred to the requirements of the Technical Memorandum (TM) issued under the NCO, the sound level meters in compliance with the International Electro technical Commission Publications 651: 1979 (Type 1) and 804: 1985 (Type 1) specifications should be used for carrying out the noise monitoring. Immediately prior to and following each noise measurement, the accuracy of the sound level meter should be checked using an acoustic calibrator generating a known sound pressure level at a known frequency. The measurements may be accepted as valid only if the difference between calibration levels obtained before and after the noise measurement is less than 1.0 dB.

3.2.2 The model of the noise monitoring equipment used is summarized in **Table 3.1**.

Table 3.1 – Construction Noise Monitoring Equipment

Item	Brand	Model	Equipment	Serial No.
1	Casella	CEL-63X Series	Integrating Sound Level Meter	1488302
2	Casella	CEL-63X Series	Integrating Sound Level Meter	1488304
3	Casella	CEL-120/1	Calibrator	5230736
4	Casella	CEL-120/1	Calibrator	5230758
5	Benetech	GM816	Anemometer	WS-08

3.3 Monitoring Parameters and Frequency

3.3.1 The parameters and frequencies of impact noise monitoring is summarized in **Table 3.2**.

Table 3.2 – Monitoring Parameters and Frequencies of Noise Monitoring

Parameter	Frequency
LAeq (30 min) (L 10 and L90 will be recorded for reference)	At each station at 0700-1900 hours on normal weekdays at a frequency of once a week

3.4 Monitoring Methodology

3.4.1 Noise measurement should be conducted as the following procedures:

- The monitoring station will set at a point 1m from the exterior of the sensitive receivers building façade and set at a position 1.2m above the ground. (In case façade measurement is not feasible on-site, a free field correction of +3dB(A) will be applied.)
- The battery condition was checked to ensure good functioning of the meter.
- Parameters such as frequency weighting, the time weighting and the measurement time will set as follows:
    - frequency weighting : A
    - time weighting : Fast
    - measurement time : continuous 5 minutes interval
- Prior to and after noise measurement, the meter shall be calibrated using the calibrator for 94.0 dB at 1000 Hz. If the difference in the calibration level before and after measurement is more than 1.0 dB, the measurement will considered invalid and repeat of noise measurement is required after re-calibration or repair of the equipment.
- Noise measurement should be paused during periods of high intrusive noise if possible and observation shall be recorded when intrusive noise is not avoided.
- Noise measurements shall not be made in fog, rain, wind with a steady speed exceeding 5 m/s or wind with gusts exceeding 10 m/s. The wind speed shall be checked with a portable wind speed meter capable of measuring the wind speed in m/s. Calibration certificate of the anemometer is provided in **Appendix D**.

3.5 Maintenance and Calibration

3.5.1 Maintenance and calibration procedures should also be carried out, including:

- The microphone head of the sound level meter and calibrator should be cleaned with a soft cloth at quarterly intervals.
- The sound level meter and calibrator should be calibrated annually by a HOKLAS laboratory.
- Relevant calibration certificates are provided in **Appendix D**.

3.6 Monitoring Locations

3.6.1 In accordance with the EM&A Manual, three noise monitoring locations, namely CM1, CM2 and CM3 are covered under Contract No. SPW 07/2020 "Environmental Team for Construction of Yuen Long Effluent Polishing Plant Stage 1".

3.6.2 The most updated locations are summarized in **Table 3.3** and the locations of the noise monitoring stations shown in **Figure 3**.

Table 3.3 – Construction Noise Monitoring Location

Monitoring Station ID	Location	Measurements
CM1	Squatter house at the north of Yuen Long STW	Free Field
CM2	Squatter house at the west of Yuen Long STW	Free Field
CM3	Squatter house at the east of Yuen Long STW	Free Field

Note: Correction of +3 dB(A) shall be made to the free field measurements.

3.7 Monitoring Results

3.7.1 The schedule of noise monitoring in reporting month is provided in **Appendix E**.

3.7.2 No Action / Limit Level exceedance of location CM1, CM2 and CM3 was recorded for construction noise in the reporting month.

3.7.3 No effect that arose from the other factors was noted during the current monitoring month.

3.7.4 No raining and wind with speed over 5 m/s was observed during noise monitoring according to the onsite observation. The weather conditions during the monitoring month are provided in **Appendix K**.

3.7.5 The noise monitoring data are summarized in **Table 3.4**. Detailed monitoring data are presented in **Appendix F**.

Table 3.4 – Summary of Construction Noise Monitoring Results

Time Period	Noise Monitoring Stations	L_{eq} (30min) dB(A) (Range)	Action Level	Limit Level dB(A)
0700-1900 hrs on normal weekdays	CM1	46-65	When one documented complaint is received	75
	CM2	54-65		75
	CM3	56-61		75

Remark:
CM1, CM2 and CM3: Free-field measurement (+3 dB(A) correction has been applied).

3.7.6 The Action and Limit Levels for noise impact monitoring have been set and are presented in **Appendix C**.

3.7.7 The Event and Action Plan for noise is given in **Appendix H**.

3.8 Comparison of Noise Monitoring data with EIA Predictions

3.8.1 The noise monitoring data was compared with the EIA predictions as summarized in **Table 3.5**.

Table 3.5 – Comparison of Noise monitoring data with EIA predictions

Monitoring Station	EIA ID	Maximum Predicted Mitigated Construction Noise Level L_{eq} (30min) dB(A)	Maximum Construction Noise Level In April L_{eq} (30min) dB(A)
CM1	NSR1	72	65
CM2	NSR2	74	65
CM3	NSR3	75	61

Notes:
Predicted TSP Concentration extracted from Table 4.9 of EIA Report, AEIAR-220/2019

3.8.2 The construction noise monitoring results at CM1, CM2 and CM3 were below the Maximum Predicted mitigated Construction Noise Level in the approved Environmental Impact Assessment (EIA) Report.

4. WATER QUALITY

4.1 Monitoring Requirement

4.1.1 In accordance with the EM&A Manuals, impact monitoring is conducted for three days per week at mid-flood and mid-ebb with sampling and measurement at the designated monitoring stations.

4.2 Monitoring Equipment

4.2.1 Equipment used for in-situ measurement and water sampling during impact water quality monitoring is summarised in **Table 4.1**. The equipment is in compliance with the requirements set out in the EM&A Manual. All in-situ monitoring instruments were calibrated by a HOKLAS-accredited laboratory. Calibration of temperature, DO, salinity, pH and turbidity is conducted in three month interval. Calibration certificates for the water quality monitoring equipment are attached in **Appendix D**.

Table 4.1 – Water Quality Monitoring and Sampling Equipment

Parameter	Equipment	Model	Range	Equipment Accuracy	Serial No.
Temperature, Dissolved Oxygen, Salinity, pH, Turbidity	Water Quality Monitoring Device	Xylem EXO 3	Temp: -5 to 50°C DO: 0-50mg/L DO%: 0-500% Sal: 0 to 70ppt pH: 0 to 14 pH units Turb: 0-4000NTU	Temp: ±0.2°C DO: ±0.1mg/L or 1% for 0-20mg/L; ±5% for 20-50mg/L Sal: ±2% of the reading or 0.2 ppt (whichever greater) pH: ±0.2 units Turb: ±3% or 0.3NTU (FNU) (whichever greater)	19E100634
					19A105833
Current Velocity and Direction	Current Meter	Valeport Model 106	Speed: 0.03 to 5 m/s Direction: 0 to 360	Speed: ± 1.5% of reading above 0.15m/s, ± 0.004 m/s below 0.15m/s Direction: ± 2.5o	67738
		River Surveyor M9	Water Depth: 0-80m	Water Depth: 1% Current speed: ±0.25% of measured velocity or ±0.2cm/s Current direction: ±2degree magnetic	5906
Water Sampling	Water Sampler	Acrylic Beta Water Bottle Kit, Horizontal, 3.2L / 4.2L	NA	NA	NA

Parameter	Equipment	Model	Range	Equipment Accuracy	Serial No.
Positioning	DGPS	Simrad MX521B Smart Antenna with Simrad MX610 CDU	NA	GPS: ±1m	NA
Water Depth	Echo Sounder	Garmin ECHO 101	Maximum depth: 457.2 m	0.1 m	NA

4.3 Equipment Calibration

4.3.1 All in-situ monitoring instruments shall be checked, calibrated and certified by a laboratory accredited under HOKLAS before use and subsequently re-calibrated at three monthly intervals throughout all stages of the water quality monitoring programme. Responses of sensors and electrodes shall be checked with certified standard solutions before each use. Wet bulb calibration for a DO meter shall be carried out before measurement at each monitoring location.

4.3.2 Sufficient stocks of spare parts shall be maintained for replacements when necessary. Backup monitoring equipment shall also be made available so that monitoring is uninterrupted even when some equipment is under maintenance or calibration etc.

4.4 Monitoring Parameters

The monitoring parameters and frequency for both in-situ measurement and laboratory analysis are summarised in Table 4.2.

Table 4.2 – Monitoring Parameters and Frequency

Parameters	Monitoring Frequency
In-situ Measurement Turbidity (in NTU), pH, Dissolved Oxygen (in mg/L and %), Temperature (in ˚C), Salinity (in ppt) Laboratory Analysis Suspended Solids	3 days per week, at mid-flood and mid-ebb tides (36 hours interval was allowed between subsequent sets of measurement)

4.5 Monitoring Operation

4.5.1 The position of water monitoring station will be located by the Differential Global Positioning System (DGPS) or equivalent. The water depth of water monitoring station will be determined by the echo sounder affixed to the bottom of the monitoring vessel or a portable echo sounder depth detector.

4.5.2 Once the location and water depth are confirmed, water samples shall be collected at 3 depths (1m below the surface, mid-depth, and 1m above the seabed) of the water column at each location, except where water depth is less than 6m, the mid-depth will be omitted and if the water depth is less than 3m only the mid-depth station will be monitored. Duplicate marine samples will be collected in each sampling event. The water samples are decanted from the water sampler into the water sample bottles. The bottles are labelled, tightly sealed, placed into a cool-box and packed with ice ready for delivery to the laboratory.

4.5.3 Two consecutive measurements of water quality data, including pH, salinity, dissolved oxygen and turbidity will be recorded according to the monitoring locations. Separate deployment of the monitoring instruments and water samplers will be conducted for the consecutive measurements or samplings. The monitoring location / position, time, water depth, sampling depth, tidal stages, weather conditions, sea condition and any special phenomena or work underway nearby shall also be recorded. If the difference in value between the first and second measurement of DO or turbidity parameters is more than 25% of the value of the first reading, the reading shall be discarded and further readings should be taken.

4.6 Laboratory Measurement / Analysis

Background

4.6.1 Fugro Technical Services Limited (HOKLAS Reg: No.015) has been appointed to conduct the laboratory measurement or analysis of water sample in this project.

Quality Assurance / Quality Control

4.6.2 The laboratory incorporates a variety of QA/QC monitoring programme into their testing system. Where applicable or available, the quality of the analysis will be monitored by conducting the following QC analysis:

For each batch of 20 samples:

- A minimal of 1 laboratory method blank will be analyzed;
- A minimal of 1 sample duplicate will be analyzed;
- A minimal of 1 sample matrix spike will be analyzed.

4.7 Monitoring Locations

4.7.1 In accordance with the EM&A Manual, water quality monitoring should be carried out at 3 designated monitoring locations.

4.7.2 The coordinates of the monitoring location stated in the EM&A Manual is summarised in **Table 4.3** and the locations of the water quality monitoring stations shown in **Figure 4**.

Table 4.3 – Coordinates of Water Quality Monitoring Locations

Sampling Location		Easting	Northing
M1	Serve as the control station at upstream location of construction site (Flood Tide) / Serve as the impact station at downstream location of construction site (Ebb Tide)	821 086	836 656
M2	Serve as the impact station at downstream location of construction site (Flood Tide)/ Serve as the control station at upstream location of construction site (Ebb Tide)	820 996	836 246
M3	Serve as the impact station at downstream location of construction site (Flood Tide) / Serve as the control station at upstream location of construction site (Ebb Tide)	820 645	836 335

4.8 Monitoring Results

4.8.1 The schedule of water quality monitoring in reporting month is provided in **Appendix E**.

4.8.2 Impact water quality monitoring was conducted at all designated monitoring stations in the reporting month. Impact water quality monitoring results and graphical presentations are provided in **Appendix F**.

4.8.3 The weather conditions during the monitoring are provided in **Appendix K**.

4.8.4 Number of exceedance recorded in the reporting month at each impact stations is summarized in **Table 4.4**.

Table 4.4 – Summary of Water Quality Exceedance

Sampling Location	Exceedance Level	DO		Turbidity		Suspended Solids		Total	
		Flood	Ebb	Flood	Ebb	Flood	Ebb	Flood	Ebb
M1	Action	0	0	0	0	0	0	0	0
	Limit	0	0	0	0	0	0	0	0
M2	Action	0	0	0	0	0	0	0	0
	Limit	0	0	0	0	0	0	0	0
M3	Action	0	0	0	0	1	0	1	0
	Limit	0	0	0	0	0	0	0	0
Total	Action	0	0	0	0	1	0	1	
	Limit	0	0	0	0	0	0	0	

4.8.5 During the reporting period, an Action Level exceedance for suspended solids at M3 at Flood tide was recorded, based on the finding from the investigation on the recorded case of exceedance, the cause was found not related to the project. The exceedance may be caused by influences in the vicinity of the station or changes of the ambient conditions.

4.8.6 The details of Notification of Exceedance can be referred to **Appendix Q**.

4.8.7 The Event and Action Plan for water quality is given in **Appendix H**.

5. ECOLOGY MONITORING

5.1 Ardeid Night Roost Monitoring

5.1.1 Monitoring Requirement

With reference to the Pre-construction Ardeid Night Roost survey (January 2021) findings that identified two active ardeid night roosts within 100 m from the Project boundary (one approximately 40 m east of the Project boundary and the other one approximately 45 m northeast of the Project boundary), consequent monthly monitoring of these active ardeid night roosts was done in accordance to the **EM&A Manual Sections 7.3.10** and **7.3.11;** and **EIA Report Section 8.12.1.3**.

The survey was conducted with the following objectives:

- Check the status and location of any active ardeid night roosts within 100 m from the Project boundary with reference to **EM&A Manual Section 7.3.10**;
- Monitor the effectiveness of proposed mitigation measures and detect any unpredicted indirect ecological impacts arising from the proposed Project as specified in **EIA Report Section 8.12.1.3**; and
- Recommend remedial actions, where appropriate, based on the impact monitoring results (**EIA Report Section 8.12.1.3**) for the implementation of the contractor as only necessary.

5.1.2 Monitoring Methodology

5.1.2.1 Monitoring Area

With reference from **Section 7.3.10 of the approved EM&A Manual**, the monitoring was conducted in areas within 100 m from the Project boundary. The monitoring area and vantage points for direct observation of any active night roosts are shown in **Appendix O**.

5.1.2.2 Monitoring Activity

5.1.2.2.1 Active Ardeid Night Roost

Current Survey focused on the two active night roosts within the Survey Area that were previously confirmed during the pre-construction Survey. These roosts include one that was approximately 40 m east of the Project boundary and another one around 45 m northeast of the mentioned boundary (**Section 3 of the approved Pre-construction Survey Report of Ardeid Night Roost**). Primary data collection with the use of 7x and 10x binoculars; and field guides including the Avifauna of Hong Kong (Carey et al., 2001) and The Birds of Hong Kong and South China (Viney et al., 2005), was from about one hour before sunset time until one hour after sunset with reference to **Section 7.3.10 of the approved EM&A Manual**. Sunset time was according to Hong Kong Observatory (HKO). The survey was conducted on 16 April 2021.

Species composition, abundance and locations of night roosts were recorded. Species composition, abundance and location of pre-roosting aggregations (PRA) were also noted. PRAs are gatherings of avian individuals prior to flying into a night roost (Moore and Switzer, 1997). The time of return of the ardeids to the pre-roost and the final night roost were also recorded. Direct observations were made from vantage points adjacent the Project site with clear and unobstructed view of any active roosting location (s) within the Survey Area. However, aside from the established vantage points for the focused mangrove strips along Shan Pui River, observations were also conducted throughout the whole 100 m study site to cover other areas aside from the mangrove strips.

Observations such any changes in site condition or disturbances detected or observed at the monitoring locations, including both construction and non-construction related activities, during the monitoring activity was recorded with reference to **Section 7.3.10 of the approved EM&A Manual**. Additionally, other observations such as bird droppings on the ground which may possibly indicate presence of night roosts were noted in addition to noting of the roosting substrate (i.e. substrate species and approximate height). Any breeding activity usage of the roosting locations within the Survey Area was also noted.

5.1.2.2.2 Noise Monitoring

Monitoring Locations, Frequency, Time and Parameters

The noise monitoring locations were established at 22°28'4.25"N, 114°1'41.32"E; and 22°28'10.43"N, 114°1'42.17"E for NMS1 and NMS2 stations, respectively. Monitoring frequency was only once a month in concurrence with the construction phase monthly monitoring of the active night roosts for correlation. Monitoring time for both stations started around 18:00, the earliest final night roost period recorded during the survey, and lasted for 30 minutes. **Table** 5.1 – Noise Monitoring Parameters presents the monitoring parameters.

Table 5.1 – Noise Monitoring Parameters (For Active Ardeid Night Roost Survey)

Parameter	Frequency and Period
LAeq (30 min) (L10 and L90 will be recorded for reference)	Monthly in concurrence with the construction phase monthly monitoring of the active night roosts

The Action and Limit Levels for Active Ardeid Night Roost Survey have been set and are presented in **Appendix C**.

However, exceedances to the limit level were endeavoured to be prevented by the full implementation of mitigation measures (**Section 4.2 of the approved Pre-construction Survey Report of Ardeid Night Roost** and **Sections 5.2.1-5.2.2 of this Report**) during the construction phase.

Event and Action Plan

In instances of exceedance/s in the action and/or limit levels, the different measures as specified in **Table 3.3 Event and Action Plan for Construction Noise** of the **approved EM&A**

Manual and likewise presented in **Appendix H** of this report shall be implemented as responses.

5.1.3 Monitoring Results

5.1.3.1 Active Ardeid Night Roost

The monitoring activity was conducted on 16 April 2021 and started around 17:44 (one hour before sunset) on a low tide condition. During the pre-roost period (PRP), the period when avian individuals gather first before flying into a night roost, individuals of Grey Heron *Ardea cinerea* and Chinese Pond Heron *Ardeola bacchus* were noted in pre-roost aggregate (PRA) around 17:48 and 17:55, respectively on the exposed mudflat contiguous to their final mangrove roosting substrate (mangrove species *Sonneratia apetala* and *S. caseolaris*) northeast of the Project boundary. Two Grey Heron individuals and four Chinese Pond Heron individuals were noted in this area while no ardeid individual was noted at the east of the Project boundary that exhibited PRA.

For the final night roost, different times were observed for the different species such that it started around as early as 18:00 for Grey Heron individuals, 18:05 for Chinese Pond Heron, and around 18:19 for both Eastern Cattle Egret *Bubulcus coromandus* and Little Egret *Egretta garzetta*. The final night roost located northeast of the Project boundary was noted with two Grey Heron individuals, four Chinese Pond Heron, 20 Eastern Cattle Egret and 11 Little Egret in roosting behaviour. All individuals of these species utilized the canopy to emergent layers of the aforementioned roosting substrate except for the Grey Heron individuals which on the other hand utilized the outer portion of the substrate's understory layer. Meanwhile, at the other active night roost area located east of the Project boundary, seven individuals of a single species, the Chinese Pond Heron, were noted roosting on the inner portion of the understory layer of similar roosting substrate *S. apetala* and *S. caseolaris*. No disturbances (construction related and otherwise) to the active night roost areas were noted during the period. Bird droppings were observed within the vicinity of this roosting area.

Summary of results is presented in **Table 5.2**.

5.1.3.2 Noise Monitoring

Noise monitoring activities were conducted on 16 April 2021 in concurrence with the construction phase monthly monitoring of the active night roosts. Noise monitoring started at 18:00 and lasted for 30 minutes, until 18:30.

Current survey results showed noise levels (L_{Aeq} (30 min.)) at both monitoring stations to be well below the action and limit levels as presented in **Table 5.3**.

Table 5.3 – Noise Monitoring Results

Frequency and Period	Location	Start Time	L_{Aeq} (30 min.)	Action Level	Limit Level
Monthly in concurrence with the construction phase monthly monitoring of the active night roosts	NMS1	18:00	50.4	65.5 dB(A)[1]	72.2 dB(A)[2]
	NMS2	18:00	49.6		

Notes:
NMS1= Noise monitoring station 1 located east of the Project boundary
NMS2= Noise monitoring station 1 located northeast of the Project boundary
1= Behavioural response of some kind more likely to occur (Wright et al. 2010)
2= Flight with abandonment of the site becomes the most likely outcome of the disturbance (Wright et al. 2010)

5.1.4 Detection of Any Unpredicted Indirect Ecological Impacts Arising from the Project

No unpredicted indirect ecological impacts that arose from the project was noted during the current monitoring period.

5.1.5 Summary

5.1.5.1 Status and Location of Any Active Ardeid Night Roost

Two active ardeid night roost sites were observed within the Survey Area during the April 2021 monitoring period. These were used by the different ardeid species such as the Grey Heron, Chinese Pond Heron, Eastern Cattle Egret and Little Egret. One roost site was located at the mangrove strip northeast of the Project boundary and the other in the east portion of the Project boundary.

5.1.5.2 Noise Monitoring Results

Both noise levels at each of the monitoring stations were below the action and limit levels.

5.2 Ecological Monitoring of Birds

5.2.1 Monitoring Requirement

With reference to **Section 7.3.6** of the **EM&A Manual,** monthly ecological monitoring of birds, focusing on avifauna species of conservation interest, and overwintering waterbirds utilising wetland habitats in Fung Lok Wai and Nam Sang Wai as well as along Shan Pui River and Kam Tin River within the monitoring area (500 m from the Project Boundary) in addition to monitoring on the utilization of wetland habitats by birds also within the same monitoring area as required by **Section 7.3.1** of the **EM&A Manual.**

5.2.2 Monitoring Methodology

5.2.2.1 Monitoring Area

The monitoring area include wetland habitats in Fung Lok Wai and Nam Sang Wai as well as along Shan Pui River and Kam Tin River within 500m from the Project boundary with reference to **Section 7.3.6** of the **EM&A Manual.** The location of point count sites and transect routes is shown in **Appendix P**.

5.2.2.2 Monitoring Activity

Avifauna survey on the different wetland habitats using the transect count and point count methods was conducted on 15 April 2021 at suitable time (early morning) which started around 06:50, when birds are most active. For the surveys overlooking the mudflats and mangroves in the Shan Pui River, monitoring activities were still conducted on the same date but already during the low tide (generally 1.5m or below) period which started around 16:00. The methodology for the monitoring activity followed **Sections 8.3.3.6** and **8.3.3.7** of the **EIA Report (AEIAR-220/2019)** and as detailed below.

For the transect count and point count methods, the presence and relative abundance of avifauna species at various wetland habitats were recorded visually and aurally. Night-time survey was scheduled during the current monitoring month to supposedly detect the presence of nocturnal species, however, due to the safety concern encountered during the night-time survey, the monitoring activity was stopped because of the potential attacks by the village dogs. Night-time survey activity was suspended to avoid further safety incident. Safety issues shall be addressed, specifically coordinating with and requesting the dog owners to keep their dogs within their premises during the duration of the night-time survey. In connection to this, continued coordination with the dog owners and/or village representative is currently being undertaken to ensure that the dogs be kept within their owners' premises during the monthly ecological survey period; and/or engage dog owners or local villagers (each from Fung Lok Wai and Nam Sang Wai) to accompany the team during the monitoring activities.

Avifauna species were detected either by direct sighting or by their call and identified to species level. Any notable behaviours such as feeding, roosting and breeding were also recorded. Bird species encountered outside the point count locations and walk transects were also recorded. A comprehensive list of species recorded from the Assessment Area was prepared, with wetland-dependence, conservation and/or protection status indicated. Ornithological nomenclature in this report follows Carey et al. (2001), Viney et al. (2005) and the most recent updated list from Hong Kong Bird Watching Society (HKBWS).

Noise levels were recorded with the methodology and equipment as mentioned in **Section 3.4 and Section 3.2**, respectively, of this EM&A report. The parameter as shown in

Table 5.4 was recorded at each of the point count locations.

Table 5.4 - Noise Monitoring Parameters

Parameter	Frequency and Location
LAeq (30 min) (L10 and L90 will be recorded for reference)	Monthly in concurrence with the monthly ecological bird monitoring at the different point count locations

In addition to recording of noise levels, any changes in site condition or disturbances detected or observed at the monitoring locations, including both construction and non-construction related activities with reference to **Section 7.3.7** of the **EM&A Manual** were also noted.

5.2.2.3 Data Analysis

For the bird communities, the monitoring results were compared to pre-construction baseline condition during the dry and wet seasons as summarized in the Baseline Bird Survey Report with reference to **Section 7.3.8** of the **EM&A Manual.** However, to further account the seasonality, monitoring results of the current month was compared to the results of the corresponding month of the baseline data.

The data for point count method and transect walk method were presented separately to account for the difference in the survey effort of the two methods. For each method, abundance and species composition of the avifauna communities during the monitoring month were summarized.

The determination of statistical variation between the baseline and impact monitoring data was not conducted due to incomplete data. In this connection, the t-test ($\alpha = 0.05$) which would determine the variation in abundance between baseline and impact monitoring data was not conducted similar with the two-sided Hutcheson t-test to be used to bird species diversity data comparison. The two-sided Hutcheson t-test was developed as a method to compare the diversity of two community samples using the Shannon diversity index (Hutcheson 1970). Shannon diversity index will be computed using the formula,

$$H' = -\sum_{i=1}^{s} p_i ln p_i$$

where, H′ = Shannon Diversity Index; P_i = proportion of the population of species; i; number of species in sample; ln = natural logarithm. Shannon diversity index is used as it accounts the proportion (relative abundance) of each species; thus, it gives a better description of diversity than a plain number of species (species richness).

The Action and Limit Levels for ecological monitoring of birds have been set and are presented in **Appendix C**.

Wetland habitat utilization during the construction phase monitoring shall only be compared seasonally, hence the comparison shall only be done after all the data (dry season and wet season) were collected with reference to **Appendix 8.5** of the approved **EIA Report**.

5.2.3 Monitoring Results

Results of the avifauna survey on the different habitats within the monitoring area using the transect count and point count methods as conducted last 15 April 2021 which started around 06:50 are presented in **Sections 5.2.3.1** and **5.2.3.2** while results for the surveys overlooking the mudflats and mangroves in the Shan Pui River, with monitoring activities conducted on the same date but already during the low tide (generally 1.5m or below) period which started around 16:00 had results presented in **Section 5.2.3.3.**

5.2.3.1 Abundance

A total of 483 avifauna individuals (ind.) was recorded during the current monitoring period using point count (255 ind.) and transect walk (228 ind.) methods. An increase in abundance was noted in this period relative to the baseline April 2017 results with a total abundance of only 345 ind. (point count=298 ind; transect walk=47 ind.).

Statistically significant differences between the current impact monitoring results and the baseline data were not determined as the current monitoring results lack the night-time data which the baseline data had, due to the aforementioned safety issue during the scheduled night-time survey.

5.2.3.1.1 All Avifauna Species

Point Count

A total of 255 avifauna ind. was observed within the monitoring area using the point count method. Among the different species recorded, the Chinese Pond Heron *Ardeola bacchus* was noted with the highest abundance (50 ind.), followed by the Masked Laughingthrush *Garrulax perspicillatus* (24 ind.) and Spotted Dove *Spilopelia chinensis* (23 ind.). The high abundance of Chinese Pond Heron in the area was due to its breeding activities on the Chinese Banyan Tree *Ficus macrocarpa* trees adjacent to the active ponds. On the other hand, several species including the Collared Crow *Corvus torquatus*, Greater Coucal *Centropus sinensis* and Pied Kingfisher *Ceryle rudis* were all noted with only one ind. each.

Relative to the April 2017 baseline data (298 ind.), a decrease in the current monitoring results was obserced.

Transect Walk

A total of 228 avifauna ind. was observed within the monitoring area using the transect walk method. Among the different species recorded, the Chinese Pond Heron was noted with the highest abundance (45 ind.), followed by the Masked Laughingthrush (28 ind.) and Spotted Dove (21 ind.). On the other hand, several species including the Greater Coucal *Centropus sinensis* (2 ind.), Wood Sandpiper *Tringa glareola* (2 ind.) and Great Egret *Ardea alba* (1 ind.), among others, were noted with low abundances.

Increase in the abundance was noted during the current monitoring period with respect to the baseline data which only recorded 47 ind.

5.2.3.1.2 Avifauna Species of Conservation Importance

Point Count

A total of 95 avifauna ind. of conservation importance was observed within the monitoring area using the point count method. Among the different species recorded, the Chinese Pond Heron was noted with the highest abundance (50 ind.) and distantly followed by the Little Egret *Egretta garzetta* with 16 ind. Several species including the Grey Heron (2 ind.), Greater Coucal (1 ind.) and Collared Crow *Corvus torquatus* (1 ind.) were noted with low abundances.

Current monitoring results showed a decrease in abundance relative to the April 2017 baseline data (200 ind.). The decrease was due to the current lesser abundances of Marsh Sandpiper *Tringa stagnatilis*, Black-winged Stilt *Himantopus himantopus* and Common Redshank *Tringa totanus* in the monitoring area. Both the Marsh Sandpiper and Common Redshank overwinter in Hong Kong and during the current period, bulk of their populations could have already migrated out of the monitoring area and continued their migration via East-Asian Australasian Flyway. In addition, a decreasing population trend of several species with conservation importance in the nearby Deep Bay area was also noted since 2008 (Sung Y-H et. al., 2021).

Transect Walk

A total of 70 avifauna ind. of conservation importance was observed within the monitoring area using the transect walk method. Among the different species recorded, the Chinese Pond Heron was noted with the highest abundance (45 ind.) and followed by the Marsh Sandpiper (11 ind.). On the other hand, species with recorded low abundances include Greater Coucal (2 ind.), Wood Sandpiper (2 ind.) and the Great Egret with only one ind.

Increase in abundance was noted during the current period with respect to the baseline data.

5.2.3.1.3 Summary

Summary of the baseline and impact monitoring abundance results are shown in **Table 5.5** and **Table 5.6.**

5.2.3.2 Diversity (Species Richness[1] and Shannon Diversity Index[2])

A total of 37 avifauna species (species richness) was noted during the current monitoring period in the different wetland habitats using the point count (30 species) and transect walk (25 species) methods. A decrease in the total number of species was currently noted with respect to the April 2017 baseline data (43) could be due to the earlier migration of other overwintering birds out of the monitoring area this period.

In terms of Shannon diversity index, increased values were noted for the transect walk method while decreased values were observed at point count method with reference to baseline values.

5.2.3.2.1 All Avifauna Species

Point Count

A total of 30 avifauna species was recorded within the monitoring area using the point count method. Overall Shannon diversity index during the current period was H'=2.89 (moderate).

A current decline in the species richness and Shannon diversity index was noted relative to the baseline results which recorded a total of 41 species and of H'=3.16 (high), respectively.

Transect Walk

A total of 25 avifauna species was recorded within the monitoring area using the transect walk method. Overall Shannon diversity index during the current period was H'=2.80 (moderate).

Increases in the current monitoring results were noted with respect to baseline values which only noted a total of 13 species and Shannon diversity index value of H'=2.10 (very low).

5.2.3.2.2 Avifauna Species of Conservation Importance

Point Count

A total of 10 avifauna species of conservation importance was recorded within the monitoring area using the point count method. Overall Shannon diversity index value during the current period was H'=1.57 (very low).

Current result showed declines in species richness as well as Shannon diversity index value from the baseline data which recorded 13 species and value of H'=1.64 (low), respectively.

Transect Walk

[1] actual number of species

[2] use to account the proportion (in terms of relative abundance) of each species

A total of 7 avifauna species of conservation importance was recorded within the monitoring area using the transect walk method. Overall Shannon diversity index value during the current period was H'=1.18 (very low).

Increases in both the species richness and Shannon diversity index value relative to the baseline results were observed during this monitoring period.

5.2.3.2.3 Summary

Summary of the baseline and impact monitoring species diversity results are shown in **Table 5.7** and **Table 5.8.**

5.2.3.3 Wetland Habitat Utilization

A total of 375 avifauna individuals (ind.) was noted during the current monitoring period in the different wetland habitats (i.e. modified watercourse, ponds, mangrove and reedbed) using the point count (225 ind.) and transect walk (150 ind.) methods. An increase in abundance was noted in this period relative to the baseline April 2017 results with a total abundance of only 313 ind. (point count=298 ind; transect walk=15 ind.).

With reference to **Section 7.3.1** of the **EM&A Manual**, the utilization of the wetland habitats by birds within the monitoring area was recorded and monitored.

5.2.3.3.1 All Avifauna Species

During the current monitoring period, majority of the wetland habitats were less utilized by avifauna species as evident with the very low to low (VL; and VL-L) abundances in these areas. With regards to species richness, generally low number of species was noted in the different wetland habitats except in the Active Ponds North to Nullah 2 in Fung Lok Wai; and Active and Inactive Ponds in Nam Sang Wai (**Table 5.9**).

Table 5.9 – Wetland habitat utilization of all avifauna species

Wetland Habitats	Area Description	Abundance[1]	Species Richness[2]
Modified Watercourse	Confluence of Shan Pui River and Kam Tin River	VL	VL- L

Wetland Habitats	Area Description	Abundance[1]	Species Richness[2]
	Shan Pui River adjacent to Project site	VL	VL
	Upper course of Shan Pui River along YLIE	VL	VL- L
Ponds	Active Ponds adjacent to Project site in Fung Lok Wai	VL- L	L- M
	Active Ponds North to Nullah 2 in Fung Lok Wai	L- M	H
	Inactive Ponds in Fung Lok Wai	VL	VL
	Active and Inactive Ponds in Nam Sang Wai	VL- L	H- VH
Mangrove	Mangrove within Assessment Area	VL	VL
Reedbed	Reedbed in Nam Sang Wai	VL	VL

Notes:

1. Abundance of avifauna species of conservation importance amongst wetland habitats within the assessment area: VL = Very Low (~<50 individuals); L = Low (~100 individuals); M = Moderate (~300 individuals); H = High (~500 individuals), VH = Very High (>700 individuals)
2. Species richness (total number of species) amongst wetland habitats within the assessment area: VL = Very Low (≤5 species); L = Low (~10 species); M = Moderate (~15 species); H = High (~20 species), VH = Very High (>25 species)

Source: approved EIA Report (AEIAR-220/2019)

5.2.3.3.2 Avifauna Species of Conservation Importance

All of the wetland habitats were noted with very low abundances of species with conservation importance during the current monitoring period which then indicated subsequent very low utilization of these areas. In terms of species richness, majority of the wetland habitats were also utilized by very low number of species (**Table 5.10**).

Table 5.10 – Wetland habitat utilization of avifauna species of conservation importance

Wetland Habitats	Area Description	Abundance[1]	Species Richness[2]
Modified Watercourse	Confluence of Shan Pui River and Kam Tin River	VL	VL- L
	Shan Pui River adjacent to Project site	VL	VL
	Upper course of Shan Pui River along YLIE	VL	VL
Ponds	Active Ponds adjacent to Project site in Fung Lok Wai	VL	VL- L
	Active Ponds North to Nullah 2 in Fung Lok Wai	VL	VL- L
	Inactive Ponds in Fung Lok Wai	VL	VL
	Active and Inactive Ponds in Nam Sang Wai	VL	VL- L
Mangrove	Mangrove within Assessment Area	VL	VL

Reedbed	Reedbed in Nam Sang Wai	VL	VL

Notes:
1. Abundance of avifauna species of conservation importance amongst wetland habitats within the assessment area: VL = Very Low (~<50 individuals); L = Low (~100 individuals); M = Moderate (~300 individuals); H = High (~500 individuals), VH = Very High (>700 individuals)
2. Species richness (total number of species) of conservation important species amongst wetland habitats within the assessment area:
VL = Very Low (≤5 species); L = Low (~10 species); M = Moderate (~15 species); H = High (~20 species), VH = Very High (>25 species)
Source: approved EIA Report (AEIAR-220/2019)

5.2.3.3.3 Overwintering Avifauna Species

The wetland habitats were noted with very low abundances of overwintering avifauna species during the current monitoring period which implied very low utilization of these areas. In terms of species richness, majority of the wetland habitats were also utilized by very low number of overwintering species (**Table 5.11**). The low values recorded during this period might be attributed to the moving out of these overwintering birds from their wintering grounds (including the monitoring area) to resume their migration process.

Table 5.11 – Wetland habitat utilization of overwintering avifauna species

Wetland Habitats	Area Description	Abundance[1]	Species Richness[2]
Modified Watercourse	Confluence of Shan Pui River and Kam Tin River	VL	VL-L
	Shan Pui River adjacent to Project site	VL	VL
	Upper course of Shan Pui River along YLIE	VL	VL
Ponds	Active Ponds adjacent to Project site in Fung Lok Wai	VL	VL
	Active Ponds North to Nullah 2 in Fung Lok Wai	VL	VL
	Inactive Ponds in Fung Lok Wai	-	-
	Active and Inactive Ponds in Nam Sang Wai	VL	VL-L

Reedbed	Reedbed in Nam Sang Wai	-	-

Notes:
1. Abundance of avifauna species of conservation importance amongst wetland habitats within the assessment area: VL = Very Low (~<50 individuals); L = Low (~100 individuals); M = Moderate (~300 individuals); H = High (~500 individuals), VH = Very High (>700 individuals)
2. Species richness of conservation important species amongst wetland habitats within the assessment area:
VL = Very Low (≤5 species); L = Low (~10 species); M = Moderate (~15 species); H = High (~20 species), VH = Very High (>25 species)
- No species recorded
Source: approved EIA Report (AEIAR-220/2019)

5.2.3.4 Noise Levels

Noise levels L_{Aeq} (30 min) recorded on 16 April 2021 from each of the point count locations during the ecological bird monitoring are shown in **Table 5.12**.

Table 5.12 – Noise Monitoring Results (For Ecological Monitoring of Birds)

Frequency and Period	Location	Start Time	L_{Aeq} (30 min) dB(A)
Monthly in concurrence with the ecological monitoring of birds	FLW1	11:10	55.8
	FLW2	10:35	53.5
	FLW3	10:35	52.8
	FLW4	10:26	53.2
	FLW5	09:21	52.4
	FLW6	08:23	45.4
	FLW7	07:40	49.8
	NSW1	13:40	53.4
	SP/NSW1	13:30	63.3
	SP/NSW2	14:15	54.9
	SP/NSW3	14:15	52.2

6. LANDSCAPE AND VISUAL

6.1 Audit Requirements

6.1.1 According to the EM&A Manual, site audits should be undertaken every week during the construction phase to check that the proposed landscape and visual mitigation measures are properly implemented and maintained as per their intended objectives.

6.2 Results and Observations

6.2.1 To monitor and audit the implementation of landscape and visual mitigation measures, four weekly landscape and visual site audits were carried out on 7, 13, 21 and 29 April 2021.

6.2.2 No outstanding issues were reported during the reporting month. Details of observations recorded during the site inspections are summarized in **Appendix M**.

7. SITE INSPECTION AND AUDIT

7.1 Site Inspection

7.1.1 Site audits were carried out by ET on weekly basis to monitor the implementation of proper environmental management practices and mitigation measures in the Project site.

7.1.2 In the reporting month, four site inspections were carried out on 7, 13, 21 and 29 April 2021.

7.1.3 No outstanding issues were reported during the reporting month. Details of observations recorded during the site inspections are summarized in **Appendix M**.

7.2 Advice on the Solid and Liquid Waste Management Status

7.2.1 The Contractor registered as a chemical waste producer for the Contract. Sufficient numbers of receptacles were available for general refuse collection and sorting.

7.2.2 The waste generated by the construction and disposal ground is presented in **Table 7.1**.

Table 7.1 – Waste Generated by the Construction and Disposal Ground

Types of Waste	Disposal Ground
Inert C&D Waste (Excluding slurry and bentonite)	Tuen Mun Area 38
Inert C&D Waste (For slurry and bentonite)	Tseung Kwan O Area 137
Non-inert C&D Materials	North East New Territories Landfill (NENT)

7.2.3 The monthly summary of waste flow table is detailed in **Appendix I**.

7.2.4 If off-site disposal is required, the excavated marine mud from the land-based works shall be disposed of at the designated disposal sites within Hong Kong as allocated by the Marine Fill Committee or other locations as agreed by the Director. The Contractor shall ensure no spilling and overflowing of materials during loading / unloading / transportation is allowed.

7.2.5 The Contractor was reminded that chemical waste containers should be properly treated and stored temporarily in designated chemical waste storage area on site in accordance with the Code of Practice on the Packing, Labelling and Storage of Chemical Waste.

8. ENVIRONMENTAL COMPLAINT AND NON-COMPLIANCE

8.1 Environmental Exceedance

8.1.1 No Action / Limit Level exceedance was recorded for 1-hr TSP level at AM1 and AM2 in the reporting month.

8.1.2 No Action / Limit Level exceedance was recorded for construction noise at CM1, CM2 and CM3 in the reporting month.

8.1.3 No Action and Limit Level exceedance was recorded for water quality at M1 and M2 in the reporting month.

8.1.4 An Action Level exceedance was recorded for water quality in the reporting month. The exceedance was recorded at M3 on 13 April 2021. It is considered that this exceedance is not project related.

8.1.5 No Action / Limit exceedance was recorded for noise levels at stations (NMS1 and NMS2) in close proximity to the active ardeid night roosts.

8.1.6 Action and Limit levels for the ecological bird monitoring were not computed due to incomplete data.

8.2 Complaints, Notification of Summons and Prosecution

8.2.1 No environmental complaint, notification of summons and successful prosecution were received in the reporting month.

8.2.2 Cumulative complaint log, summaries of complaints, notification of summons and successful prosecutions are presented in **Appendix L**.

9. IMPLEMENTATION STATUS OF ENVIRONMENTAL MITIGATION MEASURE

9.1 Implementation Status

The Contractor had implemented environmental mitigation measures and requirements as stated in the EIA Reports, the EP and EM&A Manuals. The implementation status of the environmental mitigation measures during the reporting period is summarized in **Appendix J.**

10. FUTURE KEY ISSUES

10.1 Construction Programme for the Next Three Month

- Trial pits excavation;
- Pre-drilling works;
- Temporary Sewerage/Sludge diversion -Zone 1 & 2;
- Demolition of PST no. 7 & 8;
- Piling works;
- Construction of Temporary Admin. Building, Workshop, Temporary Storage Facility and MIC office; and
- Overhaul works of A-tank, Sludge Holding Tank, FST, PST and Sludge Digestion Tanks.

10.2 Key Issues for the Coming Month

10.2.1 Potential environmental impacts arising from the above construction activities are mainly associated with construction dust, construction noise, waste management, ecology, land contamination and landscape and visual impact issues.

10.3 Monitoring Schedules for the Next Three Month

10.3.1 The tentative schedule for environmental monitoring in the coming three month is provided in **Appendix E**.

11. CONCLUSION AND RECOMMENDATION

11.1 Conclusions

11.1.1 1-hour TSP impact monitoring were carried out in the reporting month. No Action / Limit Level exceedance at AM1 and AM2 was recorded during the period.

11.1.2 Construction noise monitoring were carried out in the reporting month. No Action / Limit Level exceedance at CM1, CM2 and CM3 was recorded during the period.

11.1.3 Water quality monitoring at M1, M2 and M3 were carried out in the reporting month. No Action / Limit Level exceedance at M1 and M2 was recorded during the period. An Action Level exceedance at M3 was recorded on 13 April 2021. It is considered that this exceedance is not project related.

11.1.4 For the active ardeid night roost monitoring, two active night roost sites were observed within the Survey Area, 100 m from the Project boundary. One site was located in the mangrove strip east of the Project boundary and the other in the northeast portion of the Project boundary. Four ardeid species including the Grey Heron, Chinese Pond Heron, Eastern Cattle Egret and Little Egret were observed utilizing the aforementioned roosting sites. The mangrove species *S. apetala* and *S. caseolaris* were utilized as roosting substrate. For the PRA, two species including the Grey Heron and Chinese Pond Heron were observed with the behaviour at around 17:48 and 17:55, respectively. Meanwhile, the final roosting activity for these species in addition to other ardeid species such as the Eastern Cattle Egret and Little Egret started as early as 18:00. No breeding activity was noted in both roosting areas although majority of the individuals of these species already exhibited breeding plumages.

11.1.5 For the ecological bird monitoring, an increase in total abundance results from the baseline data of the corresponding month was noted during this current period in transect walk method, however, a decrease was otherwise noted for the point count method. In terms of Shannon diversity index values, increased values were noted for the transect walk method while decreased values were observed for the point count method. Statistical analyses to determine if the decline is statistically significant were, however, not computed due to insufficient data. Habitat utilization of conservation important species, all the wetland habitats were noted with very low relative abundances during the current monitoring period which then indicated subsequent very low utilization of these areas. Similar results for the overwintering species with very low wetland habitat utilizations were also noted. In terms of species richness (total number of species), majority of the wetland habitats were also utilized by very low number of species with conservation importance and overwintering species.

11.1.6 Four environmental site inspections were carried out in the reporting month. Recommendations on mitigation measures for Permit/ Licenses were given to the Contractor for remediating the deficiencies identified during the site inspections.

11.1.7 Four landscape and visual site audits were carried out in the reporting month.

11.1.8 Referring to the Contractor's information, no environmental complaint, notification of summons and successful prosecution was received in the reporting month.

11.2 Comment and Recommendations

11.2.1 The recommended environmental mitigation measures, as proposed in the EIA reports and EM&A Manuals shall be effectively implemented to minimize the potential environmental impacts from the Project. The EM&A programme would effectively monitor the environmental impacts generated from the construction activities and ensure the proper implementation of mitigation measures.

11.2.2 According to the environmental site inspections performed in the reporting month, the following recommendations were provided:

Air Quality Impact

- No specific observation was identified in the reporting month.

Construction Noise Impact

- No specific observation was identified in the reporting month.

Water Quality Impact

- No specific observation was identified in the reporting month.

Chemical and Waste Management

- No specific observation was identified in the reporting month.

Active Ardeid Night Roost Impact

- No specific observation was identified in the reporting month.

Ecology of Birds Impact

- No specific observation was identified in the reporting month.

Land Contamination

- No specific observation was identified in the reporting month.

Landscape and Visual Impact

- No specific observation was identified in the reporting month.

Hazard to Life

- No specific observation was identified in the reporting month.

Permit/ Licenses

- The contractor is reminded to check availability of the NRMM label.

AIP-420	E&M AIP Report for Mainstream Bio-Reactor System (AGS) - Prepare & Submission for PM's review	45	30-Jan-21	15-Mar-21	09-May-21	22-Jun-21	99
AIP-430	E&M AIP Report for Mainstream Bio-Reactor System (AGS) - Review by PM's & ICE review (28 d + 7d)	35	16-Mar-21	19-Apr-21	23-Jun-21	27-Jul-21	99
AIP-440	E&M AIP Report for Mainstream Bio-Reactor System (AGS) - Resubmission for further review	14	20-Apr-21	03-May-21	28-Jul-21	10-Aug-21	99
AIP-450	E&M AIP Report for Mainstream Bio-Reactor System (AGS) - Obtain Approval	7	04-May-21	10-May-21	11-Aug-21	17-Aug-21	99
Package 2A - Tertiary Treatment System (TTS)		101	28-Apr-21	06-Aug-21	01-Jul-21	09-Oct-21	64
AIP-460	E&M AIP Report for Tertiary Treatment System (TTS) - Prepare & Submission for PM's review	45	28-Apr-21	11-Jun-21	01-Jul-21	14-Aug-21	64
AIP-470	E&M AIP Report for Tertiary Treatment System (TTS) - Review by PM's & ICE review (28 d + 7d)	35	12-Jun-21	16-Jul-21	15-Aug-21	18-Sep-21	64
AIP-480	E&M AIP Report for Tertiary Treatment System (TTS) - Resubmission for further review	14	17-Jul-21	30-Jul-21	19-Sep-21	02-Oct-21	64
AIP-490	E&M AIP Report for Tertiary Treatment System (TTS) - Obtain Approval	7	31-Jul-21	06-Aug-21	03-Oct-21	09-Oct-21	64
Package 3A - Plant Service Water		101	28-Apr-21	06-Aug-21	04-Nov-21	12-Feb-22	190
AIP-500	E&M AIP Report for Plant Service Water - Prepare & Submission for PM's review	45	28-Apr-21	11-Jun-21	04-Nov-21	18-Dec-21	190
AIP-510	E&M AIP Report for Plant Service Water - Review by PM's & ICE review (28 d + 7d)	35	12-Jun-21	16-Jul-21	19-Dec-21	22-Jan-22	190
AIP-520	E&M AIP Report for Plant Service Water - Resubmission for further review	14	17-Jul-21	30-Jul-21	23-Jan-22	05-Feb-22	190
AIP-530	E&M AIP Report for Plant Service Water - Obtain Approval	7	31-Jul-21	06-Aug-21	06-Feb-22	12-Feb-22	190
Package 4A - E&M Report for Temp. Diversion Chamber and Pumping Station		91	30-Jan-21	30-Apr-21	11-May-21	09-Aug-21	101
AIP-540	Advance Works - E&M Report for Temporary Diversion Chamber and Pumping Station - Prepare & Submission for PM's review	35	30-Jan-21	05-Mar-21	11-May-21	14-Jun-21	101
AIP-550	Advance Works - E&M Report for Temporary Diversion Chamber and Pumping Station - Review by PM's & ICE review (28 d + 7	35	06-Mar-21	09-Apr-21	15-Jun-21	19-Jul-21	101
AIP-560	Advance Works - E&M Report for Temporary Diversion Chamber and Pumping Station - Resubmission for further review	14	10-Apr-21	23-Apr-21	20-Jul-21	02-Aug-21	101
AIP-570	Advance Works - E&M Report for Temporary Diversion Chamber and Pumping Station - Obtain Approval	7	24-Apr-21	30-Apr-21	03-Aug-21	09-Aug-21	101
Package 4B - E&M Report for SCADA Relocation		126	30-Jan-21	04-Jun-21	04-Mar-21	07-Jul-21	33
AIP-580	E&M AIP Report for Advance Works (SCADA Relocation) - Prepare & Submission for PM's review	70	30-Jan-21	09-Apr-21	04-Mar-21	12-May-21	33
AIP-590	E&M AIP Report for Advance Works (SCADA Relocation) - Review by PM's & ICE review (28 d + 7d)	35	10-Apr-21	14-May-21	13-May-21	16-Jun-21	33
AIP-600	E&M AIP Report for Advance Works (SCADA Relocation) - Resubmission for further review	14	15-May-21	28-May-21	17-Jun-21	30-Jun-21	33
AIP-610	E&M AIP Report for Advance Works (SCADA Relocation) - Obtain Approval	7	29-May-21	04-Jun-21	01-Jul-21	07-Jul-21	33
Package 4C - E&M Report for AGS Pilot Plant		70	16-Mar-21	24-May-21	15-Apr-23	23-Jun-23	760
AIP-630	E&M AIP Report for Advance Works (AGS) - Prepare & Submission for PM's review	14	16-Mar-21	29-Mar-21	15-Apr-23	28-Apr-23	760
AIP-640	E&M AIP Report for Advance Works (AGS) - Review by PM's & ICE review (28 d + 7d)	35	30-Mar-21	03-May-21	29-Apr-23	02-Jun-23	760
AIP-650	E&M AIP Report for Advance Works (AGS) - Resubmission for further review	14	04-May-21	17-May-21	03-Jun-23	16-Jun-23	760
AIP-660	E&M AIP Report for Advance Works (AGS) - Obtain Approval	7	18-May-21	24-May-21	17-Jun-23	23-Jun-23	760
Package 5A - Electrical Power Supply System for Advance Works		80	25-Feb-21	15-May-21	27-Feb-21	17-May-21	2
AIP-100	Electrical Power Supply System for Advance Works - Prepare & Submission for PM's review	24	25-Feb-21	20-Mar-21	27-Feb-21	22-Mar-21	2
AIP-110	Electrical Power Supply System for Advance Works - Review by PM's & ICE review (28 d + 7d)	35	21-Mar-21	24-Apr-21	23-Mar-21	26-Apr-21	2
AIP-120	Electrical Power Supply System for Advance Works - Resubmission for further review	14	25-Apr-21	08-May-21	27-Apr-21	10-May-21	2
AIP-130	Electrical Power Supply System for Advance Works - Obtain Approval	7	09-May-21	15-May-21	11-May-21	17-May-21	2
Package 5B - Electrical Power Supply System for YLEPP		53	20-Apr-21	11-Jun-21	16-Oct-23	07-Dec-23	909
AIP-140	Electrical Power Supply System for YLEPP - Prepare & Submission for PM's review	11	20-Apr-21	30-Apr-21	16-Oct-23	26-Oct-23	909
AIP-150	Electrical Power Supply System for YLEPP - Review by PM's review	21	01-May-21	21-May-21	27-Oct-23	16-Nov-23	909
AIP-160	Electrical Power Supply System for YLEPP - Resubmission for PM's review	14	22-May-21	04-Jun-21	17-Nov-23	30-Nov-23	909
AIP-170	Electrical Power Supply System for YLEPP - Obtain Approval	7	05-Jun-21	11-Jun-21	01-Dec-23	07-Dec-23	909
Package 6A - Control & Monitoring System		148	01-May-21	25-Sep-21	10-Nov-22	06-Apr-23	558
AIP-180	Control & Monitoring System - Prepare & Submission for PM's review	92	01-May-21	31-Jul-21	10-Nov-22	09-Feb-23	558
AIP-190	Control & Monitoring System - Review by PM's & ICE review (28 d + 7d)	35	01-Aug-21	04-Sep-21	10-Feb-23	16-Mar-23	558
AIP-200	Control & Monitoring System - Resubmission for further review	14	05-Sep-21	18-Sep-21	17-Mar-23	30-Mar-23	558
AIP-620	Control & Monitoring System - Obtain Approval	7	19-Sep-21	25-Sep-21	31-Mar-23	06-Apr-23	558
Package 7A - Building Services System		63	30-Mar-21	31-May-21	07-Apr-21	08-Jun-21	8
AIP-220	BS System - Prepare & Submission for PM's review	7	30-Mar-21	05-Apr-21	07-Apr-21	13-Apr-21	8
AIP-230	BS System - Review by PM's & ICE review (28 d + 7d)	35	06-Apr-21	10-May-21	14-Apr-21	18-May-21	8

Detailed Works Programme

Date	Revision	Checked	Approved
15-Mar-21	Rev. 0		
21-Apr-21	Rev 1		

Activity ID	Activity Name	Orig Dur	Early Start	Early Finish	Late Start	Late Finish	Total Float
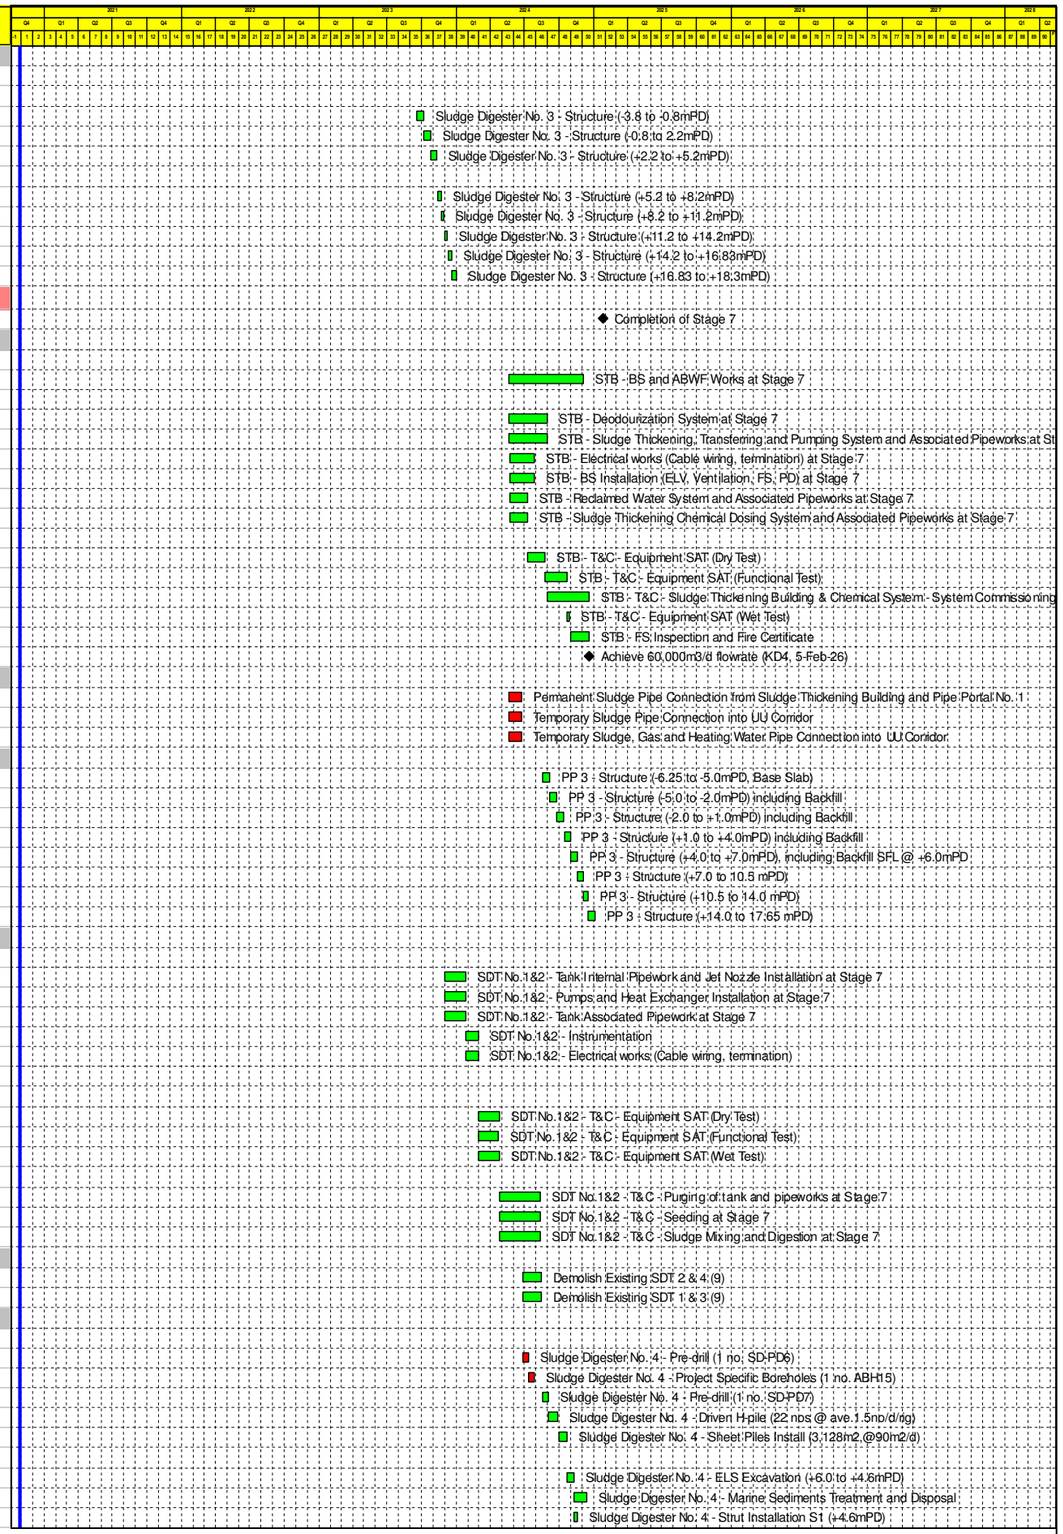
Stage 6 : New Sludge Digester No. 3 (Continued)		87	18-Sep-23	03-Jan-24	07-Feb-24	31-May-24	116
Stage 6 : SD 3 Civil and Structural Works		87	18-Sep-23	03-Jan-24	07-Feb-24	31-May-24	116
S6 : SD 3 Substructure		45	18-Sep-23	11-Nov-23	07-Feb-24	10-Apr-24	116
Z3S3-2480	Sludge Digester No. 3 - Structure (-3.8 to -0.8mPD)	15	18-Sep-23	06-Oct-23	07-Feb-24	01-Mar-24	116
Z3S3-2490	Sludge Digester No. 3 - Structure (-0.8 to 2.2mPD)	15	07-Oct-23	25-Oct-23	02-Mar-24	19-Mar-24	116
Z3S3-2530	Sludge Digester No. 3 - Structure (+2.2 to +5.2mPD)	15	26-Oct-23	11-Nov-23	20-Mar-24	10-Apr-24	116
S6 : SD 3 Superstructure		42	13-Nov-23	03-Jan-24	11-Apr-24	31-May-24	116
Z3S3-2540	Sludge Digester No. 3 - Structure (+5.2 to +8.2mPD)	8	13-Nov-23	21-Nov-23	11-Apr-24	19-Apr-24	116
Z3S3-2560	Sludge Digester No. 3 - Structure (+8.2 to +11.2mPD)	8	22-Nov-23	30-Nov-23	20-Apr-24	29-Apr-24	116
Z3S3-2570	Sludge Digester No. 3 - Structure (+11.2 to +14.2mPD)	8	01-Dec-23	09-Dec-23	30-Apr-24	09-May-24	116
Z3S3-2590	Sludge Digester No. 3 - Structure (+14.2 to +16.83mPD)	8	11-Dec-23	19-Dec-23	10-May-24	20-May-24	116
Z3S3-2610	Sludge Digester No. 3 - Structure (+16.83 to +18.3mPD)	10	20-Dec-23	03-Jan-24	21-May-24	31-May-24	116
Stage 7 (Mar 2024 to Feb 2025)		363	01-Dec-23	27-Jan-25	20-May-24	27-Jan-25	0
Z3S7-3370	Completion of Stage 7	0		27-Jan-25*		27-Jan-25	0
Stage 7 : New Sludge Thickening Building (STB) (Continued)		185	20-May-24	20-Dec-24	24-Jun-24	27-Jan-25	32
Stage 7 : STB ABWF and BS Works		165	21-May-24	04-Dec-24	12-Jul-24	27-Jan-25	43
Z3S3-3090	STB - BS and ABWF Works at Stage 7	165	21-May-24	04-Dec-24	12-Jul-24	27-Jan-25	43
Stage 7 : STB E&M Installation		86	20-May-24	29-Aug-24	24-Jun-24	27-Jan-25	123
Z3S3-3260	STB - Deodourization System at Stage 7	86	20-May-24	29-Aug-24	16-Oct-24	27-Jan-25	123
Z3S3-3270	STB - Sludge Thickening, Transferring and Pumping System and Associated Pipeworks at Stage 7	86	20-May-24	29-Aug-24	24-Jun-24	04-Oct-24	29
Z3S3-3220	STB - Electrical works (Cable wiring, termination) at Stage 7	56	22-May-24	27-Jul-24	20-Nov-24	27-Jan-25	151
Z3S3-3230	STB - BS Installation (ELV, Ventilation, FS, PD) at Stage 7	56	22-May-24	27-Jul-24	20-Nov-24	27-Jan-25	151
Z3S3-3240	STB - Reclaimed Water System and Associated Pipeworks at Stage 7	40	22-May-24	09-Jul-24	29-Jun-24	15-Aug-24	32
Z3S3-3250	STB - Sludge Thickening Chemical Dosing System and Associated Pipeworks at Stage 7	40	22-May-24	09-Jul-24	29-Jun-24	15-Aug-24	32
Stage 7 : STB Testing & Commissioning		141	10-Jul-24	20-Dec-24	16-Aug-24	27-Jan-25	32
Z3S3-2910	STB - T&C - Equipment SAT (Dry Test)	39	10-Jul-24	23-Aug-24	16-Aug-24	02-Oct-24	32
Z3S3-2920	STB - T&C - Equipment SAT (Functional Test)	48	24-Aug-24	22-Oct-24	03-Oct-24	28-Nov-24	32
Z3S3-2940	STB - T&C - Sludge Thickening Building & Chemical System - System Commissioning (60,000 m3/d) (KD4)	94	30-Aug-24	20-Dec-24	05-Oct-24	27-Jan-25	29
Z3S3-2960	STB - T&C - Equipment SAT (Wet Test)	6	23-Oct-24	29-Oct-24	29-Nov-24	05-Dec-24	32
Z3S3-2970	STB - FS Inspection and Fire Certificate	42	02-Nov-24	20-Dec-24	06-Dec-24	27-Jan-25	29
Z3S3-2980	Achieve 60,000m3/d flowrate (KD4, 5-Feb-26)	0		20-Dec-24		27-Jan-25	38
Stage 7 : UC/PP Connection		30	20-May-24	24-Jun-24	20-May-24	24-Jun-24	0
Z3S7-2000	Permanent Sludge Pipe Connection from Sludge Thickening Building and Pipe Portal No. 1	30	20-May-24	24-Jun-24	20-May-24	24-Jun-24	0
Z3S7-2010	Temporary Sludge Pipe Connection into UU Corridor	30	20-May-24	24-Jun-24	20-May-24	24-Jun-24	0
Z3S7-2020	Temporary Sludge, Gas and Heating Water Pipe Connection into UU Corridor	30	20-May-24	24-Jun-24	20-May-24	24-Jun-24	0
Stage 7 : Pipe Portal No. 3		114	17-Aug-24	03-Jan-25	10-Sep-24	27-Jan-25	20
Z3S8PP3-2000	PP 3 - Structure (-6.25 to -5.0mPD, Base Slab)	16	17-Aug-24	04-Sep-24	10-Sep-24	28-Sep-24	20
Z3S8PP3-2010	PP 3 - Structure (-5.0 to -2.0mPD) including Backfill	15	05-Sep-24	23-Sep-24	30-Sep-24	18-Oct-24	20
Z3S8PP3-2020	PP 3 - Structure (-2.0 to +1.0mPD) including Backfill	16	24-Sep-24	14-Oct-24	19-Oct-24	06-Nov-24	20
Z3S8PP3-2030	PP 3 - Structure (+1.0 to +4.0mPD) including Backfill	15	15-Oct-24	31-Oct-24	07-Nov-24	23-Nov-24	20
Z3S8PP3-2040	PP 3 - Structure (+4.0 to +7.0mPD), including Backfill SFL @ +6.0mPD	16	01-Nov-24	19-Nov-24	25-Nov-24	12-Dec-24	20
Z3S8PP3-2050	PP 3 - Structure (+7.0 to 10.5 mPD)	12	20-Nov-24	03-Dec-24	13-Dec-24	28-Dec-24	20
Z3S8PP3-2060	PP 3 - Structure (+10.5 to 14.0 mPD)	12	04-Dec-24	17-Dec-24	30-Dec-24	13-Jan-25	20
Z3S8PP3-2070	PP 3 - Structure (+14.0 to 17.65 mPD)	12	18-Dec-24	03-Jan-25	14-Jan-25	27-Jan-25	20
Stage 7 : New Sludge Digester Nos. 1 and 2 (Continued)		202	01-Dec-23	12-Aug-24	28-May-24	27-Jan-25	138
Stage 7 : E&M Installation		68	01-Dec-23	28-Feb-24	28-May-24	16-Aug-24	138
Z3S3-3280	SDT No.1&2 - Tank Internal Pipework and Jet Nozzle Installation at Stage 7	46	01-Dec-23	26-Jan-24	28-May-24	22-Jul-24	138
Z3S3-3290	SDT No.1&2 - Pumps and Heat Exchanger Installation at Stage 7	46	01-Dec-23	26-Jan-24	28-May-24	22-Jul-24	138
Z3S3-3300	SDT No.1&2 - Tank Associated Pipework at Stage 7	46	01-Dec-23	26-Jan-24	28-May-24	22-Jul-24	138
Z3S3-2750	SDT No.1&2 - Instrumentation	22	27-Jan-24	28-Feb-24	23-Jul-24	16-Aug-24	138
Z3S3-2760	SDT No.1&2 - Electrical works (Cable wiring, termination)	22	27-Jan-24	28-Feb-24	23-Jul-24	16-Aug-24	138
Stage 7 : Testing & Commissioning		134	29-Feb-24	12-Aug-24	17-Aug-24	27-Jan-25	138
S7 : Equipment SAT		44	29-Feb-24	24-Apr-24	17-Aug-24	09-Oct-24	138
Z3S3-2820	SDT No.1&2 - T&C - Equipment SAT (Dry Test)	44	29-Feb-24	24-Apr-24	17-Aug-24	09-Oct-24	138
Z3S3-2830	SDT No.1&2 - T&C - Equipment SAT (Functional Test)	43	29-Feb-24	23-Apr-24	19-Aug-24	09-Oct-24	139
Z3S3-2840	SDT No.1&2 - T&C - Equipment SAT (Wet Test)	44	29-Feb-24	24-Apr-24	17-Aug-24	09-Oct-24	138
S7 : Process Start-Up		90	25-Apr-24	12-Aug-24	10-Oct-24	27-Jan-25	138
Z3S3-2870	SDT No.1&2 - T&C - Purging of tank and pipeworks at Stage 7	90	25-Apr-24	12-Aug-24	10-Oct-24	27-Jan-25	138
Z3S3-2880	SDT No.1&2 - T&C - Seeding at Stage 7	90	25-Apr-24	12-Aug-24	10-Oct-24	27-Jan-25	138
Z3S3-2890	SDT No.1&2 - T&C - Sludge Mixing and Digestion at Stage 7	90	25-Apr-24	12-Aug-24	10-Oct-24	27-Jan-25	138
Stage 7 : Demolition of SDT 1-4		45	25-Jun-24	16-Aug-24	28-Jun-24	02-Sep-24	14
Z3S7-2030	Demolish Existing SDT 2 & 4 (9)	45	25-Jun-24	16-Aug-24	28-Jun-24	20-Aug-24	3
Z3S7-2040	Demolish Existing SDT 1 & 3 (9)	45	25-Jun-24	16-Aug-24	12-Jul-24	02-Sep-24	14
Stage 7: New Sludge Digester No. 4		170	25-Jun-24	08-Jan-25	25-Jun-24	18-Jan-25	9
Stage 7 : SD 4 Foundation and ELS Works		170	25-Jun-24	08-Jan-25	25-Jun-24	18-Jan-25	9
Z3S8SD-2000	Sludge Digester No. 4 - Pre-drill (1 no. SD-PD6)	14	25-Jun-24	11-Jul-24	25-Jun-24	11-Jul-24	0
Z3S8SD-2010	Sludge Digester No. 4 - Project Specific Boreholes (1 no. ABH15)	14	12-Jul-24	27-Jul-24	12-Jul-24	27-Jul-24	0
Z3S8SD-2020	Sludge Digester No. 4 - Pre-drill (1 no. SD-PD7)	14	17-Aug-24	02-Sep-24	21-Aug-24	05-Sep-24	3
Z3S8SD-2030	Sludge Digester No. 4 - Driven H-pile (22 nos @ ave.1.5no/d/rig)	22	03-Sep-24	28-Sep-24	13-Sep-24	10-Oct-24	9
Z3S8SD-2040	Sludge Digester No. 4 - Sheet Piles Install (3,128m2,@90m2/d)	18	30-Sep-24*	22-Oct-24	12-Oct-24	01-Nov-24	9
S7 : Excavation and Strut Installation		64	23-Oct-24	08-Jan-25	02-Nov-24	18-Jan-25	9
Z3S8SD-2050	Sludge Digester No. 4 - ELS Excavation (+6.0 to +4.6mPD)	16	23-Oct-24*	09-Nov-24	02-Nov-24	20-Nov-24	9
Z3S8SD-2060	Sludge Digester No. 4 - Marine Sediments Treatment and Disposal	30	11-Nov-24	14-Dec-24	23-Nov-24	30-Dec-24	11
Z3S8SD-2070	Sludge Digester No. 4 - Strut Installation S1 (+4.6mPD)	8	11-Nov-24	19-Nov-24	10-Dec-24	18-Dec-24	25



Activity ID	Activity Name	Orig Dur	Early Start	Early Finish	Late Start	Late Finish	Total Float
Z3S8SD-2080	Sludge Digester No. 4 - ELS Excavation (+4.6 to +1.1mPD)	16	11-Nov-24	28-Nov-24	21-Nov-24	09-Dec-24	9
Z3S8SD-2090	Sludge Digester No. 4 - Strut Installation S2 (+1.1mPD)	8	29-Nov-24	07-Dec-24	19-Dec-24	30-Dec-24	17

Action and Limit Level

Action / Limit Levels for Air Quality

Parameters	Action Level	Limit Level
1-hour TSP Level in $\mu g/m^3$	[1]For baseline level ≤ 384 $\mu g/m^3$, Action level = (baseline level * 1.3 + Limit level)/2; For baseline level > 384 $\mu g/m^3$, Action level = Limit level	500 $\mu g/m^3$

Notes:

1. The Action Level for 1-hour TSP Level:

a) AMS 2 = (63*1.3 + 500) / 2 = 291 $\mu g/m^3$;

b) AMS 3C = (70*1.3 + 500) / 2 = 296 $\mu g/m^3$.

Action and Limit Levels for Construction Noise

Time Period	Action Level	Limit Level
0700 - 1900 hours on normal weekdays	When one documented complaint is received	75 dB(A) *

Notes:

1. If works are to be carried out during restricted hours, the conditions stipulated in the construction noise permit issued by the Noise Control Authority have to be followed.
2. Correction of +3 dB(A) shall be made to the free field measurements.

Action and Limit Levels for Water Quality

Parameters	Action Levels	Limit Levels
Construction Phase Water Quality Monitoring		
DO in mg/L (Surface, Middle & Bottom) [2]	Surface & Middle 5%-ile of baseline data for surface and middle layer. Bottom 5%-ile of baseline data for bottom layer.	Surface & Middle 4 mg/L or 1%-ile of baseline data for surface and middle layer. Bottom 2 mg/L or 1%-ile of baseline data for bottom layer.
SS in mg/L (depth-averaged [1]) [3]	95%-ile of baseline data or 120% of upstream control station's SS recorded on the same day	99%-ile of baseline data or 130% of upstream control station's SS recorded on the same day
Turbidity in NTU (depth-averaged [1]) [3]	95%-ile of baseline data or 120% of upstream control station's turbidity recorded on the same day	99%-ile of baseline data or 130% of upstream control station's turbidity recorded on the same day

Notes:

1. "Depth-averaged" is calculated by taking the arithmetic means of reading of all three depths;
2. For DO, non-compliance of the water quality limits occurs when monitoring result is lower than the limits;
3. For SS and turbidity, non-compliance of the water quality limits occurs when monitoring result is higher than the limits.

Action and Limit Levels for Ecology

Active Ardeid Night Roost Survey

As there are no specific guidelines on noise thresholds for roosting ardeids, the Action and Limit levels specified in below table were based on study conducted on exploring behavioural responses of shorebirds to impulsive noise (Wright et al. 2010).

Time Period	Action Level	Limit Level
after 17:30 during dry season after 18:00 during wet season	65.5 dB(A)[1]	72.2 dB(A)[2]

Notes:
1. Behavioural response of some kind more likely to occur
2. Flight with abandonment of the site becomes the most likely outcome of the disturbance

Ecological Monitoring of Birds

Method	Parameters	Action Level[3]	Limit Level[3]
Transect	Abundance of all avifauna species (including but not only limited to overwintering waterbirds) in the community	Significant decline[1,2] in any of these parameters during the current monitoring month relative to the corresponding month during the baseline survey.	Significant decline in any of these parameters for three consecutive months.
	Species diversity of all avifauna species (including but not only limited to overwintering waterbirds) in the community		
	Abundance of species with conservation importance only		
	Species diversity of species with conservation importance only		
Point Count	Abundance of all avifauna species (including but not only limited to overwintering waterbirds) in the community		
	Species diversity of all avifauna species (including but not only limited to overwintering waterbirds) in the community		
	Abundance of species with conservation importance only		
	Species diversity of species with conservation importance only		

Notes:
1. Significant decline in abundance will be determined using two-tailed t-test, $\alpha = 0.05$.
2. Significant decline in species diversity will be determined using the Hutcheson t-test, two tailed.
3. Response will be triggered if any of the above level is reached for each parameter.

Appendix D

Calibration Certificate of Monitoring Equipment

Air Quality Monitoring Equipment

FUGRO TECHNICAL SERVICES LIMITED
Fugro Development Centre
5 Lok Yi Street, Tai Lam
Tuen Mun, NT
Hong Kong

Report no. : 940891CA202730(1)

CALIBRATION CERTIFICATE OF DUST METER

Client : Fugro Technical Services Limited

Project : Calibration Services

Client Supplied Information

Details of Unit Under Test, UUT

Description	: Laser dust monitor
Manufacturer	: SIBATA
Model No.	: LD-5R
Serial No.	: 761105
Specification Limit	: NA
Next Calibration Date	: 22-Nov-2021

Laboratory Information

Description	: 1. Balance 2. TSP high volume air sampler
Equipment ID. / Serial no.	: 1. C-065-5 2. 4350
Date of Calibration	: 23-Nov-2020 Ambient Temperature : 25 ± 10 °C
Calibration Location	: General Chemical Laboratory of FTS and Ma Wan A1 Site Boundary
Method Used	: By direct comparison the weight of dust particle trapped in a filter paper using high volume sampler (TSP method) for a certain period, with the reading of the UUT. They should be placed at the same location and powered on and off at the same time.

Calibration Results :

Reference concentration (mg/m^3)	Total count for 1 hour	CPM (Count per minute)
0.0915	3647	60.78
0.0469	3027	50.45
0.1172	3861	64.35

Remarks:

1. The equipment being used in this calibration is traceable to recognized National Standards.
2. The interpolation equation : Concentration (mg/m^3) = K x [UUT reading (CPM)], where K = 0.001456
3. Correlation coefficient (r) : 0.9928

Checked by : Date : 15-12-2020 Certified by : Date : 15-12-2020

Leung Kwok Tai (Assistant Manager)

CA-R-297 (22/07/2009)

TSP SAMPLER CALIBRATION CALCULATION SPREADSHEET

Location : MaWTF, Ma Wan
Location ID: A1 Site Boundary

Date of Calibration: 23-Oct-20
Next Calibration Date: 22-Jan-21
Technician: Felix

CONDITIONS

Sea Level Pressure (hPa):	1011.40	Corrected Pressure (mm Hg):	759
Temperature (℃):	24	Temperature (K):	297

CALIBRATION ORIFICE

Make:	Tisch	Qstd Slope:	2.11508
Model:	TE-5025A	Qstd Intercept:	-0.02962
Calibration Date:	11/9/2020	Expiry Date:	11/9/2021

CALIBRATIONS

Plate No.	H2O (L) (in)	H2O (R) (in)	H2O (in)	Qstd (m^3/min)	I (chart)	IC (corrected)	LINEAR REGRESSION	
18	5.40	-6.00	11.400	1.613	61.00	61.10	Slope =	32.5454
13	4.30	-4.70	9.000	1.435	54.00	54.09	Intercept =	8.0074
10	3.30	-3.70	7.000	1.267	49.00	49.08	Corr. coeff.:	0.9991
7	2.00	-2.50	4.500	1.019	41.00	41.07		
5	1.10	-1.60	2.700	0.792	34.00	34.05		

Calculations:

Qstd = 1/m[Sqrt(H2O(Pa/Pstd)(Tstd/Ta))-b]
IC = I[Sqrt(Pa/Pstd)(Tstd/Ta)]

Qstd = standard flow rate
IC = corrected chart response
I = actual chart response
m = calibrator Qstd slope
b = calibrator Qstd intercept
Ta = actual temperature during calibration (deg K)
Pa = actual pressure during calibration (mm Hg)
Tstd = 298 deg K
Pstd = 760 mm Hg

For subsequent calculation of sampler flow:
1/m((I)[Sqrt(298/Tav)(Pav/760)]-b)

m = sampler slope
b = sampler intercept
I = chart response
Tav = daily average temperature
Pav = daily average pressure

HKAS HOKLAS 015 CAL

CALIBRATION CERTIFICATE OF SINGLE-PAN BALANCE

Client Supplied Information

Client : Fugro Technical Services Ltd.

Address : 5 Lok Yi Street, 17 M.S. Castle Peak Road, Tai Lam, Tuen Mun, N.T.

Manufacturer	: Sartorius	Capacity	: 150 (g)
Model no.	: LA130S-F	Discrimination	: 0.0001 (g)
Serial no.	: 90104309	Operating range	: 149.9999 (g)
Equipment ID.	: C-065-5	Type	: Without Built-in Mass

Location : General Chemical Laboratory of FTS

Next calibration due date : Full Check : 08-Apr-2021 Repeatability Check : 08-Oct-2019

Laboratory Information

Equipment ID. of weight set : R-030-29

Class of weight set : E2

Equipment ID. of psychrometer : R-067-67

Date of calibration : 09-Apr-2019

Temperature during test : 25 - 25 °C Relative humidity during test : 62 - 60 %

Method used : **In house method R-C-082**

Calibration results:

Departure from nominal value

Reading (g)	Correction (g)
5.0001	-0.0001
15.0000	0.0000
30.0001	-0.0001
45.0001	-0.0001
60.0003	-0.0003
75.0002	-0.0002
90.0003	-0.0003
105.0004	-0.0005
120.0003	-0.0004
135.0002	-0.0003
150.0002	-0.0003
--	--

Note:
When the sign of the correction is positive (+) the amount should be added to the balance reading to give the correct value and when negative (-) subtracted from it.

Repeatability of reading

Reading (g)	Standard deviation of reading (g)	Max. difference between successive reading (g)
5.0001	0.00010	0.0002
75.0002	0.00008	0.0002
150.0002	0.00007	0.0002

MaterialLab

HOKLAS 015 CAL

Effect of off-centre loading

A mass of approximately 50 (g) was placed at various positions of the weighing pan.
The differences in balance readings are given in the table.

Centre	Front	Rear	Left	Right	Maximum difference (g)
0.0000	0.0002	-0.0001	-0.0002	0.0005	0.0007

Hysteresis

Load (g)	Hysteresis (g)
100.0001	less than 0.0002

Tare check

Tare load (g)	Balance reading with 99.9999 (g)	Error (g)
50.0000	100.0000	0.0001

Uncertainty of weighing (correction is applied) = ± 0.0004 g at 95% confidence level, with a coverage factor of **2.09**

The uncertainty of weighing is the tolerance band within which 95% balance readings will fall after appropriate correction is applied

Limit of performance for the balance (no correction is applied) = ± 0.0010 g

The limit of performance is the tolerance band within which 95% balance readings will fall.

Remarks :

1. The equipment used in this calibration is traceable to recognized National Standards.
2. The reported hysteresis value is an average from three trials. In each trial, an extra mass was added to bring the balance reading close to full capacity after the specified load was placed on the pan. Hysteresis value is the difference of the readings of the specified load, before the extra mass was added and after it has been removed.
3. The uncertainty for departure from nominal value is ± **0.0004** g

5	O	z_5=	0.0000	150.0006	10	O	z_{10}=	0.0000	150.0006
	M	m_5=	150.0006			M	m_{10}=	150.0006	

3. Results of repeatability test

σ of readings near to zero : 0.000052 g σ_1 in last full check : 0.000103 g

σ of readings at half capacity : 0.000071 g

σ of readings at full capacity : 0.000053 g

Maximum value of σ is greater than σ_1 : [√] **No.**

[ ] **Yes** - carry out a full check

$\sigma = [\Sigma(r_i-r)^2/(n-1)]^{1/2}$,where i = 1,...,,10 ,r = mean value in the column "Difference".

or minimum $\sigma = dx/n^{1/2}$,where n=10 and dx is the discrimination of balance.

Note :

A full check should be carried out at least once every three years.

A full check must be carried out if the value of σ was increased in a repeatability test.

A repeatability test was carried out once every six months.

Pass	√
Fail	
N/A	

Remarks:

1. The equipment used in this calibration has traceable accuracy to National Primary Standards.
2. [√] Recommended next calibration date : 24-May-2021
3. [ ] The balance was recommended to carry out a full check.

[ ] Tick the appropriate.

CALIBRATION CERTIFICATE OF SOUND LEVEL METER

Client Supplied Information

Client : Fugro Technical Services Ltd.

Project : Calibration Services

Details of Unit Under Test, UUT

Description : Sound Level Meter

Manufacturer : Casella

	Meter	Microphone	Preamplifier
Model No. :	CEL-63X	CE-251	CEL-495
Serial No. :	1488302	03348	003036

Equipment ID : N/A

Next Calibration Date : 13-Jul-2021

Specification Limit : EN 61672-1: 2003 Class 1

Laboratory Information

Details of Reference Equipment -

Description : B & K Acoustic Multifunction Calibrator 4226 (Traditional free field setting)

Equipment ID. : R-108-1

Date of Calibration : 14-Jul-2020

Calibration Location : Calibration Laboratory of FTS Ambient Temperature : 20±2 °C

Method Used : By direct comparison

Calibration Results :

Parameters		Mean Value (dB)	Specification Limit(dB)
A-weigthing frequency response	4000Hz	0.9	2.6 to -0.6
	2000Hz	1.1	2.8 to -0.4
	1000Hz	0.0	1.1 to -1.1
	500Hz	-3.3	-1.8 to -4.6
	250Hz	-8.8	-7.2 to -10.0
	125Hz	-16.3	-14.6 to -17.6
	63Hz	-26.3	-24.7 to -27.7
	31.5Hz	-39.4	-37.4 to -41.4
Differential level linearity	94dB-104dB	0.0	± 0.6
	104dB-114dB	0.0	± 0.6

Remarks :

1. The equipment used in this calibration is traceable to recognized National Standards.
2. The mean value is the average of four measurements.
3. For calibration: Reference SPL are 94, 104 & 114dB, range setting is 20-140dB & time weighting is fast
4. The UUT complies with EN 61672-1: 2003 Class 1 sound level meter for the above measurement.
5. The values given in this Calibration Certificate only relate to the values at the time of the test and any uncertainties will not include allowance for the equipment long term drift, variations with environment changes, vibration and shock during tranportation, overloading, mis-handling or the capability of any other laboratory to repeat the measurement.

CALIBRATION CERTIFICATE

This document certifies that the instrument detailed below has been calibrated according to Valeport Limited's Standard Procedures, using equipment with calibrations traceable to UKAS or National Standards.

Calibration Certificate Number:	**61134**
Instrument Type:	MODEL 106
Instrument Serial Number:	67738
Calibrated By:	N.PADDON
Date:	11TH NOVEMBER 2019
Signed:	

Full details of the results from the calibration procedure applied to each fitted sensor are available, on request, via email. This summary certificate should be kept with the instrument.

Remark

1. Orange and Bold: Action Level Exceedance
2. Red and Bold: Limit Level Exceedance
3. Action Level for Turbidity: 95%-ile of baseline data or 120% of upstream control station's turbidity recorded on the same day.
4. Limti Level for Turbidity: 99%-ile of baseline data or 130% of upstream control station's turbidity recorded on the same day.
5. Action Level for SS: 95%-ile of baseline data or 120% of upstream control station's SS recorded on the same day.
6. Limti Level for SS: 99%-ile of baseline data or 130% of upstream control station's SS recorded on the same day.

Appendix H

Event and Action Plan

Event and Action Plan for Air Quality (Construction Dust)

EVENT	ACTION			
	ET	IEC	ER	Contractor
Action level being exceeded by one sampling	1. Identify source, investigate the causes of complaint and propose remedial measures; 2. Inform Contractor, IEC and ER; 3. Repeat measurement to confirm finding; and 4. Increase monitoring frequency to daily.	1. Check monitoring data submitted by ET; 2. Check Contractor's working method; and 3. Review and advise the ET and ER on the effectiveness of the proposed remedial measures.	1. Notify Contractor.	1. Identify source(s), investigate the causes of exceedance and propose remedial measures; 2. Implement remedial measures; and 3. Amend working methods agreed with the ER as appropriate.
Action level being exceeded by two or more consecutive sampling	1. Identify source; 2. Inform Contractor, IEC and ER; 3. Advise the Contractor and ER on the effectiveness of the proposed remedial measures; 4. Repeat measurements to confirm findings; 5. Increase monitoring frequency to daily; 6. Discuss with IEC and Contractor on remedial actions required; 7. If exceedance continues, arrange meeting with Contractor, IEC and ER; and 8. If exceedance stops, cease additional monitoring.	1. Check monitoring data submitted by ET; 2. Check Contractor's working method; 3. Discuss with ET, ER and Contractor on possible remedial measures; 4. Advise the ET and ER on the effectiveness of the proposed remedial measures; and 5. Supervise Implementation of remedial measures.	1. Confirm receipt of notification of exceedance in writing; 2. Notify Contractor; 3. Ensure remedial measures properly implemented.	1. Identify source and investigate the causes of exceedance; 2. Submit proposals for remedial measures to the ER with a copy to ET and IEC within three working days of notification; 3. Implement the agreed proposals; and 4. Amend proposal as appropriate.
Limit level being exceeded by one sampling	1. Identify source, investigate the causes of exceedance and propose remedial measures; 2. Inform Contractor, IEC, ER, and EPD; 3. Repeat measurement to confirm finding; 4. Increase monitoring frequency to daily; and 5. Assess effectiveness of Contractor's remedial actions and keep IEC, EPD and ER informed of the results.	1. Check monitoring data submitted by ET; 2. Check Contractor's working method; 3. Discuss with ET and Contractor on possible remedial measures; 4. Advise the ER on the effectiveness of the proposed remedial measures; and 5. Supervise implementation of remedial measures.	1. Confirm receipt of notification of exceedance in writing; 2. Notify Contractor; 3. Ensure remedial measures properly implemented.	1. Identify source(s) and investigate the causes of exceedance; 2. Take immediate action to avoid further exceedance; 3. Submit proposals for remedial measures to ER with a copy to ET and IEC within three working days of notification; 4. Implement the agreed proposals; and 5. Amend proposal if appropriate.
Limit level being exceeded by two or more consecutive sampling	1. Notify IEC, ER, Contractor and EPD; 2. Identify source; 3. Repeat measurement to confirm findings; 4. Increase monitoring frequency to daily; 5. Carry out analysis of Contractor's working procedures to determine possible mitigation to be implemented; 6. Arrange meeting with IEC and ER to discuss the remedial actions to be taken; 7. Assess effectiveness of Contractor's remedial actions and keep IEC, EPD and ER informed of the results; and 8. If exceedance stops, cease additional monitoring.	1. Check monitoring data submitted by the ET; 2. Discuss amongst ER, ET, and Contractor on the potential remedial actions; 3. Review Contractor's remedial actions whenever necessary to assure their effectiveness and advise the ER accordingly; and 4. Supervise the implementation of remedial measures.	1. Confirm receipt of notification of exceedance in writing; 2. In consultation with the ET and IEC, agree with the Contractor on the remedial measures to be implemented; 3. Supervise the implementation of remedial measures; and 4. If exceedance continues, consider what portion of the work is responsible and instruct the Contractor to stop that portion of work until the exceedance is abated.	1. Identify source(s) and investigate the causes of exceedance; 2. Take immediate action to avoid further exceedance; 3. Submit proposals for remedial measures to the ER with a copy to the IEC and ET within three working days of notification; 4. Implement the agreed proposals; 5. Revise and resubmit proposals if problem still not under control; and 6. Stop the relevant portion of works as determined by the ER until the exceedance is abated.

Event and Action Plan for Noise (Construction)

EVENT	ACTION			
	ET	IEC	ER	Contractor
Action Level	1. Notify IEC and Contractor; 2. Carry out investigation; 3. Report the results of investigation to the IEC, ER and Contractor; 4. Discuss with the Contractor and formulate remedial measures; and 5. Increase monitoring frequency to check mitigation effectiveness.	1. Review the analyzed results submitted by the ET; 2. Review the proposed remedial measures by the Contractor and advise the ER accordingly; and 3. Supervise the implementation of remedial measures.	1. Confirm receipt of notification of failure in writing; 2. Notify Contractor; 3. Require Contractor to propose remedial measures for the analyzed noise problem; and 4. Ensure remedial measures are properly implemented.	1. Submit noise mitigation proposals to IEC; and 2. Implement noise mitigation proposals.
Limit Level	1. Identify source; 2. Inform IEC, ER, EPD and Contractor; 3. Repeat measurements to confirm findings; 4. Increase monitoring frequency; 5. Carry out analysis of Contractor's working procedures to determine possible mitigation to be implemented; 6. Inform IEC, ER and EPD the causes and actions taken for the exceedances; 7. Assess effectiveness of Contractor's remedial actions and keep IEC, EPD and ER informed of the results; and 8. If exceedance stops, cease additional monitoring.	1. Discuss amongst ER, ET, and Contractor on the potential remedial actions; 2. Review Contractors remedial actions whenever necessary to assure their effectiveness and advise the ER accordingly; and 3. Supervise the implementation of remedial measures.	1. Confirm receipt of notification of failure in writing; 2. Notify Contractor; 3. Require Contractor to propose remedial measures for the analyzed noise problem; 4. Ensure remedial measures properly implemented; and 5. If exceedance continues, consider what portion of the work is responsible and instruct the Contractor to stop that portion of work until the exceedance is abated.	1. Take immediate action to avoid further exceedance; 2. Submit proposals for remedial actions to IEC within 3 working days of notification; 3. Implement the agreed proposals; 4. Resubmit proposals if problem still not under control; and 5. Stop the relevant portion of works as determined by the ER until the exceedance is abated.

Event and Action Plan for Water Quality Monitoring

EVENT	ACTION			
	ET	IEC	ER	Contractor
Action level being exceeded by one sampling day	1. Repeat in situ measurement on the next day of exceedance to confirm findings; 2. Check monitoring data, plant, equipment and Contractor(s)'s working methods; 3. Identify source(s) of impact and record in notification of exceedance; 4. Inform IEC, Contractor(s) and ER	1. Check monitoring data submitted by ET and Contractor(s)'s working methods; 2. Inform EPD and AFCD.	1. Confirm receipt of notification of exceedance in writing	1. Confirm receipt of notification of exceedance in writing; 2. Check plant and equipment and rectify unacceptable practice
Action level being exceeded by two or more consecutive sampling days	1. Repeat in situ measurement on the next day of exceedance to confirm findings; 2. Check monitoring data, plant, equipment and Contractor(s)'s working methods; 3. Identify source(s) of impact and record in notification of exceedance; 4. Inform IEC, Contractor(s) and ER; 5. Discuss with IEC and Contractor(s) on additional mitigation measures and ensure that they are implemented.	1. Check monitoring data submitted by ET and Contractor(s)'s working methods; 2. Inform EPD and AFCD; 3. Discuss with ET and Contractor(s) on additional mitigation measures and advise ER accordingly; 4. Assess the effectiveness of the implemented mitigation measures.	1. Confirm receipt of notification of exceedance in writing; 2. Discuss with the IEC on the proposed additional mitigation measures and agree on the mitigation measures to be implemented. 3. Ensure additional mitigation measures are properly implemented.	1. Confirm receipt of notification of exceedance in writing; 2. Check plant and equipment and rectify unacceptable practice; 3. Consider changes of working methods; 4. Discuss with ET and IEC on additional mitigation measures and propose them to ER within 3 working days; 5. Implement the agreed mitigation measures.

EVENT	ACTION			
	ET	IEC	ER	Contractor
Limit level being exceeded by one sampling day	1. Repeat in situ measurement on the next day of exceedance to confirm findings; 2. Check monitoring data, plant, equipment and Contractor(s)'s working methods; 3. Identify source(s) of impact and record in notification of exceedance; 4. Inform IEC, Contractor(s) and ER; 5. Discuss with IEC and Contractor(s) on additional mitigation measures and ensure that they are implemented.	1. Check monitoring data submitted by ET and Contractor(s)'s working methods; 2. Inform EPD and AFCD; 3. Discuss with ET and Contractor(s) on additional mitigation measures and advise ER accordingly; 4. Assess the effectiveness of the implemented mitigation measures.	1. Confirm receipt of notification of exceedance in writing; 2. Discuss with the IEC on the proposed additional mitigation measures and agree on the mitigation measures to be implemented. 3. Ensure additional mitigation measures are properly implemented. 4. Request Contractor(s) to critically review the working methods.	1. Confirm receipt of notification of exceedance in writing; 2. Check plant and equipment and rectify unacceptable practice; 3. Critically review the need to change working methods; 4. Discuss with ET and IEC on additional mitigation measures and propose them to ER within 3 working days; 5. Implement the agreed mitigation measures.
Limit level being exceeded by two or more consecutive sampling days	1. Repeat in situ measurement on the next day of exceedance to confirm findings; 2. Check monitoring data, plant, equipment and Contractor(s)'s working methods; 3. Identify source(s) of impact and record in notification of exceedance; 4. Inform IEC, Contractor(s) and ER; 5. Discuss with IEC and Contractor(s) on additional mitigation measures and ensure that they are implemented.	1. Check monitoring data submitted by ET and Contractor(s)'s working methods; 2. Inform EPD and AFCD; 3. Discuss with ET and Contractor(s) on additional mitigation measures and advise ER accordingly; 4. Assess the effectiveness of the implemented mitigation measures.	1. Confirm receipt of notification of exceedance in writing; 2. Discuss with the IEC on the proposed additional mitigation measures and agree on the mitigation measures to be implemented. 3. Ensure additional mitigation measures are properly implemented. 4. Request Contractor(s) to critically review the working methods.	1. Confirm receipt of notification of exceedance in writing; 2. Check plant and equipment and rectify unacceptable practice; 3. Critically review the need to change working methods; 4. Discuss with ET and IEC on additional mitigation measures and propose them to ER within 3 working days; 5. Implement the agreed mitigation measures.

Event and Action Plan for Ecology Monitoring

Event	Action			
	ET	IEC	ER	Contractor
Action Level	1. Notify IEC and Contractor; 2. Carry out investigation; 3. Report the results of investigation to the IEC, ER and Contractor; 4. Discuss with the Contractor and formulate remedial measures; and 5. Increase monitoring frequency to check mitigation effectiveness.	1. Review the analyzed results submitted by the ET; 2. Review the proposed remedial measures by the Contractor and advise the ER accordingly; and 3. Supervise the implementation of remedial measures.	1. Confirm receipt of notification of failure in writing; 2. Notify Contractor; 3. Require Contractor to propose remedial measures for the analyzed noise problem; and 4. Ensure remedial measures are properly implemented.	1. Submit noise mitigation proposals to IEC; and 2. Implement noise mitigation proposals.
Limit Level	1. Identify source; 2. Inform IEC, ER, EPD and Contractor; 3. Repeat measurements to confirm findings; 4. Increase monitoring frequency; 5. Carry out analysis of Contractor's working procedures to determine possible mitigation to be implemented; 6. Inform IEC, ER and EPD the causes and actions taken for the exceedances; 7. Assess effectiveness of Contractor's remedial actions and keep IEC, EPD and ER informed of the results; and 8. If exceedance stops, cease additional monitoring.	1. Discuss amongst ER, ET, and Contractor on the potential remedial actions; 2. Review Contractor's remedial actions whenever necessary to assure their effectiveness and advise the ER accordingly; and 3. Supervise the implementation of remedial measures.	1. Confirm receipt of notification of failure in writing; 2. Notify Contractor; 3. Require Contractor to propose remedial measures for the analysed noise problem; 4. Ensure remedial measures are properly implemented; and 5. If exceedance continues, consider what portion of the work is responsible and instruct the Contractor to stop that portion of work until the exceedance is abated.	1. Take immediate action to avoid further exceedance; 2. Submit proposals for remedial actions to IEC within 3 working days of notification; 3. Implement the agreed proposals; 4. Resubmit proposals if problem still not under control; and 5. Stop the relevant portion of works as determined by the ER until the exceedance is abated.

Appendix I

Waste Flow Table

Waste Flow Table for Year 2021											
Monthly Ending	Total Quantity Generated	Actual Quantities of Inert C&D Materials Generated Monthly					Actual Quantities of Non-inert C&D Wastes Generated Monthly				
		Hard Rock and Large Broken Concrete	Reused in the Contract	Reused in other Projects	Disposed as Public Fill	Imported Fill	Metals	Paper/ cardboard packaging	Plastics (see Note 2)	Chemical Waste	Others, e.g. general refuse
	(in tonnes)	(in tonnes)	(in tonnes)	(in tonnes)	(in tonnes)	(in tonnes)	(in tonnes)	(in tonnes)	(in tonnes)	(in tonnes)	(in tonnes)
2021 Jan	Nil	Nil	Nil	Nil	Nil	Nil	Nil	Nil	Nil	Nil	Nil
2021 Feb	Nil	Nil	Nil	Nil	Nil	Nil	Nil	Nil	Nil	Nil	Nil
2021 Mar	Nil	Nil	Nil	Nil	Nil	Nil	Nil	Nil	Nil	Nil	Nil
2021 Apr	216.92	0.00	0.00	0.00	152.94	0.00	0.00	0.00	0.00	0.00	63.98

2021 Jul											
2021 Aug											
2021 Sep											
2021 Oct											
2021 Nov											
2021 Dec											
Total	216.92	0	0	0	152.94	0	0	0	0	0	63.98

Note:
1) The waste flow table shall also include C&D materials that are specified in the Contract to be imported for use at the Site.
2) Plastics refer to plastic bottles/containers, plastic sheets/foam from packaging materials.

Appendix J

Implementation Status of Environment Mitigation Measures

EIA Ref.	Environmental Protection Measures	Location / Duration of Measures / Timing of Completion of Measures	Implementation Status
Air Quality Impact			
Construction Phase			
3.6.1.6	Watering once per every two hours on active works areas to reduce dust emission.	All active works areas during construction phase	N/A
3.8.1.1	Dust suppression measures stipulated in the Air Pollution Control (Construction Dust) Regulation and good site practices listed below shall be carried out to further minimize construction dust impact: • Use of regular watering to reduce dust emissions from exposed site surfaces and unpaved roads, particularly during dry weather. • Use of frequent watering for particularly dusty construction areas and areas close to ASRs. • Side enclosure and covering of any aggregate or dusty material storage piles to reduce emissions. Where this is not practicable owing to frequent usage, watering shall be applied to aggregate fines. • Open stockpiles shall be avoided or covered. Where possible, prevent placing dusty material storage piles near ASRs. • Tarpaulin covering of all dusty vehicle loads transported to, from and between site locations. • Establishment and use of vehicle wheel and body washing facilities at the exit points of the site. • Provision of wind shield and dust extraction units or similar dust mitigation measures at the loading area of barging point, and use of water sprinklers at the loading area where dust generation is likely during the loading process of loose material, particularly in dry seasons/ periods. • Provision of not less than 2.4m high hoarding from ground level along site boundary where adjoins a road, streets or other accessible to the public except for a site entrance or exit. • Imposition of speed controls for vehicles on site haul roads. • Where possible, routing of vehicles and positioning of construction plant should be at the maximum possible distance from ASRs. • Instigation of an environmental monitoring and auditing program to monitor the construction process in order to enforce controls and modify method of work if dusty conditions arise.	Construction Sites	Implemented
Operation Phase			
3.5.2.4	Biogas generated will be stored in the biogas holders. The stored biogas will go through the sulphur absorption vessels to remove thehydrogen sulphide (H2S) before passing to the combined heat and power (CHP) generator.	YLEPP / Operation Phase	N/A
3.6.3.2 – 3.6.3.5	Install selective catalytic reduction (SCR) to control Nitrogen Dioxide (NO2) emission at the exhausts of the CHP, boiler and ammonia stripping unit.	YLEPP / Operation Phase	N/A
3.6.2.9 and 3.7.2.1	Install an activated carbon filter with odour (ammonia) removal efficiency of at least 70% at the ammonia stripping unit exhaust.	YLEPP / Operation Phase	N/A
3.7.2.1	All the odour sources in YLEPP should be covered and all odourous gas should be treated at the deodourizers (DOs) with 90% - 95% odour removal efficiency before venting to the atmosphere.	YLEPP / Operation Phase	N/A

EIA Ref.	Environmental Protection Measures	Location / Duration of Measures / Timing of Completion of Measures	Implementation Status
Noise Impact			
Construction Phase			
4.8.1	Movable noise barriers are recommended for hydraulic breakers mounted on excavators to be adopted during construction. Good site practices listed below and the noise control requirements stated in EPD's "Recommended Pollution Control Clauses for Construction Contracts" should be included in the Contract Specification for the Contractors to follow and should be implemented to further minimize the potential noise impacts during the construction phase of the Project. • Quiet PME, such that those listed in EPD's Quality Powered Mechanical Equipment, should be considered for construction works to further minimize the potential construction noise impact. • Only well-maintained plant should be operated on-site and plant should be serviced regularly during the construction programme. • Silencers or mufflers on construction equipment should be utilised and should be properly maintained during the construction programme. • Mobile plant, if any, should be sited as far away from noise sensitive receivers (NSRs) as possible. • Machines and plant (such as trucks) that may be in intermittent use should be shut down between work periods or should be throttled down to a minimum. • Plant known to emit noise strongly in one direction should, wherever possible, be orientated so that the noise is directed away from the nearby NSRs • Material stockpiles and other structures should be effectively utilised, wherever practicable, in screening noise from on-site construction activities.	Construction Sites	N/A
Operation Phase			
4.8.2	Fixed plant noise sources (except extraction fans) should be located within plantroom with silencers at air inlet and outlet and a sound proof door. Ventilation fans should be installed with silencers. Commissioning test should be conducted to ensure fixed plant noise impact would comply with the relevant noise standards	YLEPP / Operation Phase	N/A
Water Quality Impact			
Construction Phase			
5.8.1.2	Water used in ground boring and drilling for site investigation or rock / soil anchoring should as far as practicable be re-circulated after sedimentation. When there is a need for final disposal, the wastewater should be discharged into storm drains via silt removal facilities	Construction Sites / Construction Phase	Implemented
5.8.1.3	All vehicles and plant should be cleaned before they leave a construction site to minimise the deposition of earth, mud, debris on roads. A wheel washing bay should be provided at every site exit if practicable and wash-water should have sand and silt settled out or removed before discharging into storm drains. The section of construction road between the wheel washing bay and the public road should be paved with backfill to reduce vehicle tracking of soil and to prevent site run-off from entering public road drains.	Construction Sites / Construction Phase	N/A
5.8.1.4	Good site practices should be adopted to remove rubbish and litter from construction sites so as to prevent the rubbish and litter from spreading from the site area. It is recommended to clean the construction sites on a regular basis.	Construction Sites / Construction Phase	N/A

EIA Ref.	Environmental Protection Measures	Location / Duration of Measures / Timing of Completion of Measures	Implementation Status
5.8.1.5 – 5.8.1.6	The site practices outlined in ProPECC PN 1/94 "Construction Site Drainage" should be followed where applicable to minimise surface run-off and the chance of erosion. Surface run-off from construction sites should be discharged into storm drains via adequately designed sand / silt removal facilities such as sand traps, silt traps and sedimentation basins. Channels, earth bunds or sand bag barriers should be provided on site to properly direct stormwater to such silt removal facilities. Perimeter channels at site boundaries should be provided as necessary to intercept storm run-off from outside the site so that it will not wash across the site. Catchpits and perimeter channels should be constructed in advance of site formation works and earthworks.	Construction Sites / Construction Phase	N/A
5.8.1.7	Silt removal facilities, channels and manholes should be maintained and the deposited silt and grit should be removed regularly (as well as at the onset of and after each rainstorm) to prevent overflows and localised flooding.	Construction Sites / Construction Phase	N/A
5.8.1.8	Construction works should be programmed to minimise soil excavation in the wet season (i.e. April to September). If soil excavation cannot be avoided in these months or at any time of year when rainstorms are likely, temporarily exposed slope surfaces should be covered e.g. by tarpaulin, and temporary access roads should be protected by crushed stone or gravel, as excavation proceeds. Intercepting channels should be provided (e.g. along the crest / edge of excavation) to prevent storm run-off from washing across exposed soil surfaces.	Construction Sites / Construction Phase	N/A
5.8.1.9	Earthworks final surfaces should be well compacted and the subsequent permanent work or surface protection should be carried out immediately after the final surfaces are formed to prevent erosion caused by rainstorms. Appropriate drainage like intercepting channels should be provided where necessary	Construction Sites / Construction Phase	N/A
5.8.1.10	Measures should be taken to minimise the ingress of rainwater into trenches. If excavation of trenches in the wet season is necessary, they should be dug and backfilled in short sections. Rainwater pumped out from trenches or foundation excavations should be discharged into storm drains via silt removal facilities.	Construction Sites / Construction Phase	Implemented
5.8.1.11	Construction materials (e.g. aggregates, sand and fill material) on sites should be covered with tarpaulin or similar fabric during rainstorms	Construction Sites / Construction Phase	Implemented
5.8.1.12	Manholes (including newly constructed ones) should always be adequately covered and temporarily sealed so as to prevent silt, construction materials or debris from getting into the drainage system, and to prevent storm run-off from getting into foul sewers. Discharge of surface run-off into foul sewers must always be prevented in order not to unduly overload the foul sewerage system.	Construction Sites / Construction Phase	N/A
5.8.1.13	The practices outlined in Environment, Transport and Works Bureau (ETWB) TC (Works) No. 5/2005 Protection of natural streams/rivers from adverse impacts arising from construction works" should also be adopted where applicable to minimise the water quality impacts upon any natural streams or surface water systems.	Construction Sites / Construction Phase	N/A
5.8.1.14	Sufficient chemical toilets should be provided in the works areas. A licensed waste collector should be deployed to clean the chemical toilets on a regular basis.	Construction Sites / Construction Phase	Implemented
5.8.1.15	Notices should be posted at conspicuous locations to remind the workers not to discharge any sewage or wastewater into the surrounding environment.	Construction Sites / Construction Phase	N/A
5.8.1.16	Contractor must register as a chemical waste producer if chemical wastes would be produced from the construction activities. The WDO (Cap 354) and its subsidiary regulations in particular the Waste Disposal (Chemical Waste) (General) Regulation, should be observed and complied with for control of chemical wastes.	Construction Sites / Construction Phase	Implemented

EIA Ref.	Environmental Protection Measures	Location / Duration of Measures / Timing of Completion of Measures	Implementation Status
5.8.1.17	Any service shop and maintenance facilities should be located on hard standings within a bunded area, and sumps and oil interceptors should be provided. Maintenance of vehicles and equipment involving activities with potential for leakage and spillage should only be undertaken within the areas appropriately equipped to control these discharges.	Construction Sites / Construction Phase	N/A
5.8.1.18	Disposal of chemical wastes should be carried out in compliance with the WDO. The Code of Practice on the Packaging, Labelling and Storage of Chemical Wastes published under the WDO should be followed to avoid leakage or spillage of chemicals.	Construction Sites / Construction Phase	N/A
5.8.1.19	All the runoff and wastewater generated from the works areas should be treated so that it satisfies all the standards listed in the Technical Memorandum on Standards for Effluents Discharged into Drainage and Sewerage Systems, Inland and Coastal Waters (TM-DSS).	Construction Sites / Construction Phase	N/A
Design and Operation Phases			
5.8.2	Best Management Practices (BMPs) to reduce storm water and non-point source pollution are also proposed as follows: <u>Design Measures</u> •Exposed surface shall be avoided within the the proposed development to minimise soil erosion. Development site shall be either hard paved or covered by landscaping area where appropriate to reduce soil erosion. •The existing watercourses in adjacent to the Project site will be retained to maintain the original flow path. The drainage system will be designed to avoid flooding. <u>Devices/ Facilities to Control Pollution</u> •Screening facilities such as standard gully grating and trash grille, with spacing which is capable of screening off large substances such as fallen leaves and rubbish should be provided at the inlet of drainage system. •Road gullies with standard design and silt traps should be provided to remove particles present in stormwater runoff, where appropriate. <u>Administrative Measures</u> •Good management measures such as regular cleaning and sweeping of road surface/ open areas are suggested. The road surface/open area cleaning should also be carried out prior to occurrence rainstorm. •Manholes, as well as stormwater gullies, ditches provided at the Project site should be regularly inspected and cleaned (e.g. monthly). Additional inspection and cleansing should be carried out before forecast heavy rainfall.	Project site / Design and Operation Phase	Implemented
5.8.2.11	Chemical should be stored on site at bunded area and separate drainage system as appropriate should be provided to avoid any spilled chemicals from entering the storm drain in case of accidental spillage. Also, adequate tools for cleanup of spilled chemicals should be stored on site and appropriate training shall be provided to staffs to further prevent potential adverse water quality impacts from happening.	Project site / Design and Operation Phase	Implemented
Waste Management Implication Construction Phase			

EIA Ref.	Environmental Protection Measures	Location / Duration of Measures / Timing of Completion of Measures	Implementation Status
6.6.1.3	<u>Good Site Practices</u> Recommendations for good site practices during the construction phase include: • Nomination of approved personnel, such as a site manager, to be responsible for good site practices, and making arrangements for collection of all wastes generated at the site and effective disposal to an appropriate facility; • Training of site personnel in proper waste management and chemical waste handling procedures; • Provision of sufficient waste reception/ disposal points, of a suitable vermin-proof design that minimises windblown litter; • Arrangement for regular collection of waste for transport off-site and final disposal; • Appropriate measures to minimise windblown litter and dust during transportation of waste by either covering trucks or by transporting wastes in enclosed containers; • Regular cleaning and maintenance programme for drainage systems, sumps and oil interceptors; • A recording system for the amount of wastes generated, recycled and disposed (including the disposal sites) should be proposed; and • A WMP should be prepared and should be submitted to the Engineer for approval. One may make reference to ETWB TCW No. 19/2005 for details.	Construction Sites	Implemented
6.6.1.5	<u>Waste Reduction Measures</u> Recommendations to achieve waste reduction include: • Segregate and store different types of construction related waste in different containers, skips or stockpiles to enhance reuse or recycling of materials and their proper disposal; • Provide separate labelled bins to segregate recyclable waste such as aluminium cans from other general refuse generated by the work force, and to encourage collection by individual collectors; • Any unused chemicals or those with remaining functional capacity shall be recycled; • Maximising the use of reusable steel formwork to reduce the amount of C&D material; • Prior to disposal of C&D waste, it is recommended that wood, steel and other metals shall be separated for re-use and / or recycling to minimise the quantity of waste to be disposed of to landfill; • Adopt proper storage and site practices to minimise the potential for damage to, or contamination of, construction materials; • Plan the delivery and stock of construction materials carefully to minimise the amount of surplus waste generated; • Adopt pre-cast construction method instead of cast-in-situ method for construction of concrete structures as much as possible; and • Minimise over ordering of concrete, mortars and cement grout by doing careful check before ordering.	Construction Sites	Implemented
6.6.1.7	<u>Storage of Waste</u> Recommendations to minimise the impacts include: • Waste, such as soil, should be handled and stored well to ensure secure containment, thus minimising the potential of pollution; • Maintain and clean storage areas routinely; • Stockpiling area should be provided with covers and water spraying system to prevent materials from wind-blown or being washed away; and • Different locations should be designated to stockpile each material to enhance reuse.	Construction Sites	Implemented

EIA Ref.	Environmental Protection Measures	Location / Duration of Measures / Timing of Completion of Measures	Implementation Status
6.6.1.8	Collection of Waste Licensed waste haulers should be employed for the collection and transportation of waste generated. The following measures should be enforced to minimise the potential adverse impacts: • Remove waste in timely manner; • Waste collectors should only collect wastes prescribed by their permits; • Impacts during transportation, such as dust and odour, should be mitigated by the use of covered trucks or in enclosed containers; • Obtain relevant waste disposal permits from the appropriate authorities, in accordance with the WDO (Cap. 354), Waste Disposal (Charges for Disposal of Construction Waste) Regulation (Cap. 345) and the Land (Miscellaneous Provisions) Ordinance (Cap. 28); • Waste should be disposed of at licensed waste disposal facilities; and • Maintain records of quantities of waste generated, recycled and disposed.	Construction Sites	Implemented
6.6.1.10	Transportation of Waste In order to monitor the disposal of C&D materials at PFRFs and landfills and to control fly-tipping, a trip-ticket system should be established in accordance with DEVB TCW No. 6/2010. A recording system for the amount of waste generated, recycled and disposed, including the disposal sites, should also be set up. Warning signs should be put up to remind the designated disposal sites. CCTV should be installed at the vehicular entrance and exit of the site as additional measures to prevent fly-tipping.	Transportation Route of Waste / Construction Phase	N/A
6.6.1.12	Construction and Demolition Material Careful design, planning together with good site management can reduce over-ordering and generation of C&D materials such as concrete, mortar and cement grouts. Formwork should be designed to maximize the use of standard wooden panels, so that high reuse levels can be achieved. Alternatives such as steel formwork or plastic facing should be considered to increase the potential for reuse	Construction Sites	N/A
6.6.1.13	The excavated material arising from site formation and foundation works should be reused on-site as backfilling material and for landscaping works as far as practicable. Other mitigation requirements are listed below: • A WMP, which becomes part of the EMP, should be prepared in accordance with ETWB TCW No.19/2005; • A recording system for the amount of wastes generated, recycled and disposed (including the disposal sites) should be adopted for easy tracking; and • In order to monitor the disposal of C&D materials at public filling facilities and landfills and to control fly-tipping, a trip-ticket system should be adopted (refer to DEVB TCW 06/2010).	Construction Sites	Implemented
6.6.1.14	It is recommended that specific areas should be provided by the Contractors for sorting and to provide temporary storage areas (if required) for the sorted materials. Control measures for temporary stockpiles on-site should be taken in order to minimise the noise, generation of dust and pollution of water. These measures include: • Surface of stockpiled soil should be regularly wetted with water especially during dry season; • Disturbance of stockpile soil should be minimised; • Stockpiled soil should be properly covered with tarpaulin especially when heavy storms are predicted; and • Stockpiling areas should be enclosed where space is available.	Construction Sites	N/A

EIA Ref.	Environmental Protection Measures	Location / Duration of Measures / Timing of Completion of Measures	Implementation Status
6.6.1.15	The Contactor should prepare and implement an EMP in accordance with ETWB TCW No.19/2005, which describes the arrangements for avoidance, reuse, recovery, recycling, storage, collection, treatment and disposal of different categories of waste to be generated from construction activities. Such a management plan should incorporate site-specific factors, such as the designation of areas for segregation and temporary storage of reusable and recyclable materials. The EMP should be submitted to the Engineer for approval. The Contractor should implement waste management practices in the EMP throughout the construction stage of the Project. The EMP should be reviewed regularly and updated by the Contractor, preferably on a monthly basis.	Construction Sites	Implemented
6.6.1.16	The Contractor would be responsible for devising a system to work for on-site sorting of C&D materials and promptly removing all sorted and process materials arising from the construction activities to minimise temporary stockpiling on-site. The system should be included in the EMP identifying the source of generation, estimated quantity, arrangement for on-site sorting, collection, temporary storage areas and frequency of collection by recycling Contractors or frequency of removal off-site.	Construction Sites	N/A
6.6.1.17 – 6.6.1.18	The sediment should be excavated, handled, transported and disposed of in a manner that would minimise adverse environmental impacts. To minimise sediment disposal, it is proposed to reuse the Type 1 sediment generated (e.g. as backfilling materials) as far as possible. Requirements of the Air Pollution Control (Construction Dust) Regulation, where relevant, shall be adhered to during excavation, transportation and disposal of the sediment.	Construction Sites	N/A
6.6.1.19	Workers shall, if necessary, wear appropriate personal protective equipments (PPE) when handling contaminated sediments. Adequate washing and cleaning facilities shall also be provided on site.	Construction Sites	N/A
6.6.1.20	For off-site disposal, the basic requirements and procedures specified under ETWB TC(W) No. 34/2002 shall be followed.	Transportation Route of Waste / Construction Phase	N/A
6.6.1.24	Stockpiling of contaminated sediments should be avoided as far as possible. If temporary stockpiling of contaminated sediments is necessary, the excavated sediment should be covered by tarpaulin and the area should be placed within earth bunds or sand bags to prevent leachate from entering the ground, nearby drains and surrounding water bodies. The stockpiles should be completely paved or covered by linings in order to avoid contamination to underlying soil or groundwater. Separate and clearly defined areas should be provided for stockpiling of contaminated and uncontaminated materials. Leachate, if any, should be collected and discharged according to the Water Pollution Control Ordinance (WPCO).	Construction Sites	N/A
6.6.1.25	In order to minimise the potential odour / dust emissions during excavation and transportation of the sediment, the excavated sediments shall be wetted during excavation / material handling and shall be properly covered when placed on trucks or barges. Loading of the excavated sediment to the barge shall be controlled to avoid splashing and overflowing of the sediment slurry to the surrounding water.	Construction sites & transportation route of waste / Construction phase	N/A
6.6.1.26	The barge transporting the sediments to the designated disposal sites shall be equipped with tight fitting seals to prevent leakage and shall not be filled to a level that would cause overflow of materials or laden water during loading or transportation. In addition, monitoring of the barge loading shall be conducted to ensure that loss of material does not take place during transportation. Transport barges or vessels shall be equipped with automatic self-monitoring devices as specified by the DEP.	Transportation route of waste / Construction phase	N/A

EIA Ref.	Environmental Protection Measures	Location / Duration of Measures / Timing of Completion of Measures	Implementation Status
6.6.1.27	Suitable containers compatible with the chemical wastes should be used, and incompatible chemicals should be stored separately. Appropriate labels should be securely attached on each chemical waste container indicating the corresponding chemical characteristics of the chemical waste, such as explosive, flammable, oxidizing, irritant, toxic, harmful, corrosive, etc. The Contractor shall employ a licensed collector to transport and dispose of the chemical wastes, to the licensed CWTC, or other licensed facilities, in accordance with the Waste Disposal (Chemical Waste) (General) Regulation.	Construction and Operation Phases	N/A
6.6.1.28	It is recommended to place clearly labelled recycling bins at designated locations with convenient access. Other general refuse should be separated from chemical and industrial waste by providing separated bins or skips for storage to maximise the recyclable volume. A reputable licensed waste collector should be employed to remove general refuse on a daily basis to minimise odour, pest and litter impacts.	Construction and Operation Phases	Implemented
6.6.1.29	Should buildings are found with potential ACM, sufficient and reasonable lead time shall be allowed for preparation, vetting and implementation of Asbestos Investigation Report and Asbestos Abatement Plan in accordance with Air Pollution Control Ordinance before commencement of any demolition or site clearance work.	Demolition	N/A
Operation Phase			
6.6.2.2	The below good housekeeping practices for the proposed YLEPP should be followed to further ameliorate any odour impact from handling, collection, transportation and disposal of screenings, grits and sludge: • Screens should be cleaned regularly to remove any accumulated organic debris; • Screening and grit transfer systems should be flushed regularly with water to remove organic debris and grit; • Grit and screened materials should be transferred to closed containers; • Scum and grease collection wells and troughs should be emptied and flushed regularly to prevent putrefaction of accumulated organics; • Skim and remove floating solids and grease from primary clarifiers regularly; • Frequent sludge withdrawal from tanks is necessary to prevent the production of gases; • Organic waste should be transported to YLEPP by fully enclosed pipes or trucks to avoid odour nuisance; • Sludge should be transported to the STF by water-tight containers to avoid H2S/odour emission and ingress of water into the containers which would lower the sludge dryness during transportation; • Sludge cake should be transferred to closed containers ; • Sludge containers should be flushed with water regularly; and • Sludge trucks and containers should be washed thoroughly before leaving the YLEPP to avoid any odour nuisance during transportation.	Operation Phase	N/A
Land Contamination			

EIA Ref.	Environmental Protection Measures	Location / Duration of Measures / Timing of Completion of Measures	Implementation Status
7.8.1.2 - 7.8.1.3; 7.8.2.1	Prior to the commencement of the SI works, a review of the Contamination Assessment Plan (CAP) should be conducted to confirm whether the proposed SI works (e.g. sampling locations, testing parameters etc.) are still valid. Supplementary CAP(s), presenting findings of the review, the latest site conditions and updated sampling strategy and testing protocol, should be submitted to EPD for endorsement. The SI works should be carried out according to EPD's agreed supplementary CAP(s). SI works should be carried out according to the supplementary CAP endorsed by EPD. Following completion of SI works and receipt of laboratory test results, Contamination Assessment Report(s) ((CAR)(s)) should be prepared to present the findings of the SI works and to discuss the presence, nature and extent of contamination. If contamination is identified, Remedial Action Plan(s) ((RAP)(s)) which provides details of the remedial actions for the identified contaminated soil and / or groundwater should be endorsed by EPD. The possible remediation methods are detailed in Section 5.2 of the CAP provided in Appendix 7.1 of the EIA Report. Remediation action, if necessary, will be carried out according to EPD endorsed RAP(s) and Remediation Report(s) (RR(s)) will be submitted after completion of the remediation action. The RR(s) should be endorsed by EPD prior to the commencement of construction works at the respective identified contaminated areas (if any).	Existing YLSTW / Construction Phase (after decommissioning of the concerned facilities / areas but prior to the construction works at the concerned facilities / areas)	N/A
7.8.3.1	The mitigation measures will be recommended in the RAP and would typically include the following: • Excavation profiles must be properly designed and executed with attention to the relevant requirements for environment, health and safety; • Excavation shall be carried out during dry season as far as possible to minimise contaminated runoff from contaminated soils; Supply of suitable clean backfill material (or treated soil) after excavation; • Stockpiling site(s) shall be lined with impermeable sheeting and bunded. Stockpiles shall be fully covered by impermeable sheeting to reduce dust emission. If this is not practicable due to frequent usage, regular watering shall be applied. However, watering shall be avoided on stockpiles of contaminated soil to minimise contaminated runoff. • Vehicles containing any excavated materials shall be suitably covered to limit potential dust emissions or contaminated wastewater run-off, and truck bodies and tailgates shall be sealed to prevent any discharge during transport or during wet conditions; • Speed control for the trucks carrying contaminated materials shall be enforced; • Vehicle wheel and body washing facilities at the site's exist points shall be established and used; and • Pollution control measures for air emissions (e.g. from biopile blower and handling of cement), noise emissions (e.g. from blower or earthmoving equipment), and water discharges (e.g. runoff control from treatment facility) shall be implemented and complied with relevant regulations and guidelines.	Project Site / Construction Phase	N/A
Ecological Impact (Terrestrial and Aquatic)			
Construction Phase			
8.10.2.1	<u>Avoidance of Recognised Site of Conservation Importance</u> Construction works are designed to be confined to the boundary of the existing YLSTW that direct impacts on all other sites of conservation importance within the assessment area, including the Ramsar Site, Priority Site, WCA, WBA, SSSI and CA would be avoided.	Project site / Construction Phase	N/A

EIA Ref.	Environmental Protection Measures	Location / Duration of Measures / Timing of Completion of Measures	Implementation Status
8.10.2.3 – 8.10.2.4	Avoidance of Demolition Works Using Breakers Mounted on Excavators and Percussive Piling during Dry Season In order to minimise the construction noise disturbance on overwintering waterbirds, the noisy construction works, i.e. all percussive piling works and demolition using breakers mounted on excavators, would therefore be scheduled outside the dry season (i.e. November to March, which is the peak overwintering period of waterbirds).	Construction sites / Construction Phase	N/A
8.10.2.5	Restriction of Construction Hours No construction activities with the use of PME should be conducted within 100m from any night roost confirmed by the pre-construction survey after 18:00 during wet season and 17:30 during dry season to avoid disturbance to the nearby ardeids night roosts.	Construction sites / Construction Phase	N/A
8.10.3.2 – 8.10.3.3	Minimising Construction Noise Disturbance Impacts through Consideration of Alternative Construction Methods Demolition using concrete crusher is quieter than demolition using breaker that its construction noise level is comparable to other general construction activities and concrete crusher would be used for demolition works to be undertaken during dry season months. The quieter foundation methods, including bored piling, raft foundation and shallow foundation, would be adopted as far as possible.	Construction sites / Construction Phase	N/A
8.10.3.4 – 8.10.3.5	Minimising Construction Noise Disturbance Impacts Through Careful Phasing of Construction Activities Percussive piling works and demolition using breakers mounted on excavators would typically be completed over two wet seasons and not be undertaken in the same construction zone at the same time to localise the construction disturbance and to reduce the duration of high level of disturbances on sensitive wetland habitats and associated waterbirds nearby each construction zone. Facilities in the eastern side of the Project site (i.e. Phase 1A and Phase 1B) are scheduled to be developed first that the new structures could screen the works in the middle and western parts of the site in later stage of the construction phase after the structures in Phase 1A and Phase 1B are completed, hence minimising the construction noise and human disturbance on sensitive wetland habitats adjacent to the Project site in Shan Pui River, including the confluence of Shan Pui River and Kam Tin River and ardeid night roost to the immediate east of the Project site.	Project site / Construction Phase	N/A
8.10.3.6 – 8.10.3.8	Minimising Construction Noise Disturbance Impacts through Use of Noise Barriers Noise barriers with absorptive materials of about 4m high will be erected along the northern, eastern and western sides of the site, throughout the construction phase to screen the construction noise and human disturbance to the waterbirds foraging in ponds in Fung Lok Wai and Shan Pui River during construction phase. Adequate noise barriers should also be provided for demolition works using breakers mounted on excavators and percussive piling works, to further minimise the construction noise disturbance from these construction activities. Movable noise barriers should be provided to breaker mounted on excavator used for demolition works as discussed in Section 4.8 and acoustic mat should be provided to the piling plants around the rig. The contractor should provide enclosure for construction equipment, especially static plants, as appropriate to minimise the noise disturbance as far as practicable.	Construction sites / Construction Phase	Implemented
8.10.3.9	Use of Quality Powered Mechanical Equipment The contractor should source QPMEs for construction as far as practicable to further minimise the overall construction noise and other disturbance to the nearby wetland habitats and associated waterbirds to the maximum practical extent.	Construction sites / Construction Phase	N/A
Ecology & Fisheries Impact			

EIA Ref.	Environmental Protection Measures	Location / Duration of Measures / Timing of Completion of Measures	Implementation Status
8.12.1.4, 9.7	Groundwater observation wells and recharge wells will be provided at the northern and western side of the site. Groundwater table will be closely monitored at the observation well. In case of any unlikely events of abnormal drawdown of groundwater table near the excavation area, groundwater dewatering will stop and water will be pumped into the recharge wells to recover the normal groundwater table as necessary.	Construction Phase	N/A
Fisheries Impact			
9.7	The implementation of good site practices during construction could minimise the potential water quality impacts from the land-based construction works. Mitigation measures recommended in the Water Quality Impact Assessment (Section 5) for controlling water quality impact would also serve to protect fisheries resources and activities from indirect impacts.	Construction and Operation Phase	N/A
Landscape and Visual Impact			
Table 10.11	Preservation of Existing Vegetation (CM1) All the existing Trees to be retained and not to be affected by the Project shall be carefully protected during construction accordance with DEVB TCW No. 7/2015 - Tree Preservation and the latest Guidelines on Tree Preservation during Development issued by GLTM Section of DevB. Any existing vegetation in landscaped areas and natural terrain not to be affected by the Project shall be carefully preserved.	Project site / Construction Phase	Implemented
Table 10.11	Transplanting of Affected Trees (CM2) Trees unavoidably affected by the works shall be transplanted as far as possible in accordance with DEVB TCW No. 7/2015 - Tree Preservation and the latest Guidelines on Tree Transplanting issued by GLTM Section of DevB.	Project site / Construction Phase	Implemented
Table 10.11	Compensatory Tree Planting (CM3) Any trees to be felled under the Project shall be compensated in accordance with DEVB TCW No. 7/2015 - Tree Preservation. For trees to be compensated on slopes, the guidelines for tree planting stipulated in GEO Publication No. 1/2011 will be followed.	Project site / Construction Phase	N/A
Table 10.11	Control of Night-time Lighting Glare (CM4) All the night time lighting shall be avoided except for safety purpose. No light glare shall illuminate directly outside the site.	Project site / Construction Phase	N/A
Table 10.11	Erection of Decorative Screen Hoarding (CM5) Site hoardings, if any, shall be painted in dull green colour	Project site / Construction Phase	N/A
Table 10.11	Management of Construction Activities and Facilities (CM6) Construction activities shall be well scheduled and avoid powered mechanical equipment's operating simultaneously. All stockpiling areas and idled area shall be covered by tarpaulin sheet or hydroseeded as far as possible.	Project site / Construction Phase	N/A
Table 10.12	Roadside and Amenity Planting (OM1) Roadside amenity trees and understory planting to be planted along EVA and access roads within YLEPP	YLEPP / Operational Phase	N/A
Table 10.12	Infill Planting Proposals (OM2) Infill planting of trees, shrubs and/ or groundcovers shall be incorporated into the YLEPP layout where space is available.	YLEPP / Operational Phase	N/A
Table 10.12	Enhancement of Landscape Buffer (OM3) With the retained existing trees surrounding the YLSTW perimeter, thickening of understory plantings and/ or moundings in YLEPP will be created as landscape buffer to the surroundings as much as possible.	YLEPP / Operational Phase	N/A

EIA Ref.	Environmental Protection Measures	Location / Duration of Measures / Timing of Completion of Measures	Implementation Status
Table 10.12	Control of Night-time Lighting Glare (OM4) All the night time lighting shall be avoided except for safety purpose. No light glare shall illuminate directly outside the YLEPP.	YLEPP / Operational Phase	N/A
Table 10.12	Responsive Design of Building (OM5) Aesthetically pleasing design as regard to the form, material and finishes shall be incorporated to all buildings, engineering structures and associated infrastructure facilities so as to blend in the buildings and structures to the adjacent landscape and visual context.	YLEPP	N/A
Hazard to Life Construction Phase			
11.5.6.9-11.5.6.12	• Implementation of those major construction works and movement of plants and vehicles would be stringently controlled to have a setback of at least 15m clear distance, or physical barrier with an empty digester / gas holder from the digesters / gas holders in operation; • For those construction works to be carried out in close proximity to the 15m zone from digesters / gas holders in operation, the height of plants for those major construction shall be limited to 15m such that the plants would not damage digesters /gas holders in such incident as plant collapse or overturning; • Whenever practicable, the construction sequence shall be arranged with empty unit(s) for separating the major construction works from these digesters / gas holders in use; and • Physical barriers such as concrete blocks shall be set up at the 15m zone in order to avoid those construction plants or vehicles from colliding to the digester / gas holder units in use.	Project site / Construction Phase	N/A
11.5.8	• Method statements and risk assessments shall be prepared and safety control measures shall be in place before commencement of work • All work procedures shall be complied with the operating plant procedures or guidelines and regulatory requirements; • Work permit system, on-site pre-work risk assessment and emergency response procedure shall be in place before commencement of work; • All construction workers shall equip with appropriate personal protective equipment (PPE) when working at the Project Site; • Safety training and briefings shall be provided to all construction workers; • Regular site safety inspections shall be conducted during the construction phase of the Project;	Project site / Construction Phase	Implemented

EIA Ref.	Environmental Protection Measures	Location / Duration of Measures / Timing of Completion of Measures	Implementation Status
11.9.1.2	• Ensure speed limit enforcement is specified in the contractor's method statement to limit the speed of construction vehicles onsite; • Conduct speed checks to ensure enforcement of speed limits and to ensure adequate site access control ; • A lifting plan, with detailed risk assessment, should be prepared and endorsed for heavy lifting of large equipment; • Vehicle crash barriers should be provided between the construction site and the operating biogas facilities; • Ensure that a hazardous are classification study is conducted and hazardous area maps are updated before the start of the construction activities to ensure ignition sources are controlled during both construction and operation phases; • Ensure work permit system for hot work activities within the Project Site is specified in the contractor's method statement to minimize and control the ignition sources during the construction phase; • Ensure effective communication system / protocol is in place between the contractors and the operation staff; • Ensure the Project Construction Emergency Response Plan is integrated with the Emergency Response Plan for the YLEPP during construction phase. The plan should address stop work instructions to be promptly communicated to all construction workers performing hot works in case a confirmed biogas detection at the Project Site; • Ensure that the construction activities do not impede the functions of fire and gas detection system, fire protection system, muster areas, fire-fighting vehicle access and escape routes; • Ensure a Job Safety Analysis is conducted for construction activities of the Project during the construction phase, to identify and analyze hazards associated with the construction activities (e.g. lifting operations by cranes) onto the operating biogas facilities. Potential risks of the construction activities shall be assessed, and risk precautionary measures shall be implemented in Contractor's works procedures.	Project site / Construction Phase	Implemented
Operation Phase			
11.9.1.1	• Process plant building should be provided with adequate number of gas detectors distributed over various areas of potential leak sources to provide adequate coverage. • All electrical equipment inside the building should be classified in accordance with the electrical area classification requirements. No unclassified electrical equipment should be used during operations or maintenance. • All safety valves should be designed to discharge the released fluid to a safe location and stop misdirection of fluid flows in order to avoid hazardous outcome. • Safety markings and crash barriers should be provided to the aboveground piping, digesters and gas holders near the entrance. • Fixed crash barriers should be provided in areas where process equipment is adjacent to the internal roadway to protect against vehicle collision. Adequate warning signage and lighting should also be provided and maximum speed limit should also be in place. • Lightning protection installations should be installed following IEC 62305, BS EN 62305, AS/NZS 1768, NFPA 780 or equivalent standards. • Suitable fire extinguishers should be provided within the site. An External Water Spray System (EWSS) should be installed in appropriate areas, such as around the gasholders, digester and sulphur removal vessels. The facilities should also be equipped with fire and gas detection system and fire suppression system. • Stringent procedures should be implemented to prohibit smoking or naked flames to be used on-site.	YLEPP / Operational Phase	N/A

Note:
Implementation status: Implemented / Partially Implemented / Not Implemented / Not Applicable (N/A)

Appendix O.1: Monitoring Area, Vantage Points for Observation of Active Night Roosts and Noise Monitoring Stations

FUGRO

O.2 Survey Photos

O.2.1 Pre-roosting Aggregate

Appendix O.2.2a: Pre-roost aggregate of Grey Heron northeast of the Project boundary observed on 16 April 2021 around 17:48

Appendix O.2.1b: Pre-roost aggregate of Chinese Pond Heron northeast of the Project boundary observed on 16 April 2021 around 17:55

O.2.2 Active Night Roosting Sites and Roosting Substrates

Appendix O.2.2.a: Active night roost on *Sonneratia apetala* and *S. caseolaris* mangrove roosting substrate located northeast of the Project boundary observed on 16 April 2021 around 18:19

Appendix O.2.2.b: Active night roost on *Sonneratia apetala* and *S. caseolaris* mangrove roosting substrate located east of the Project boundary observed on 16 April 2021 around 18:05

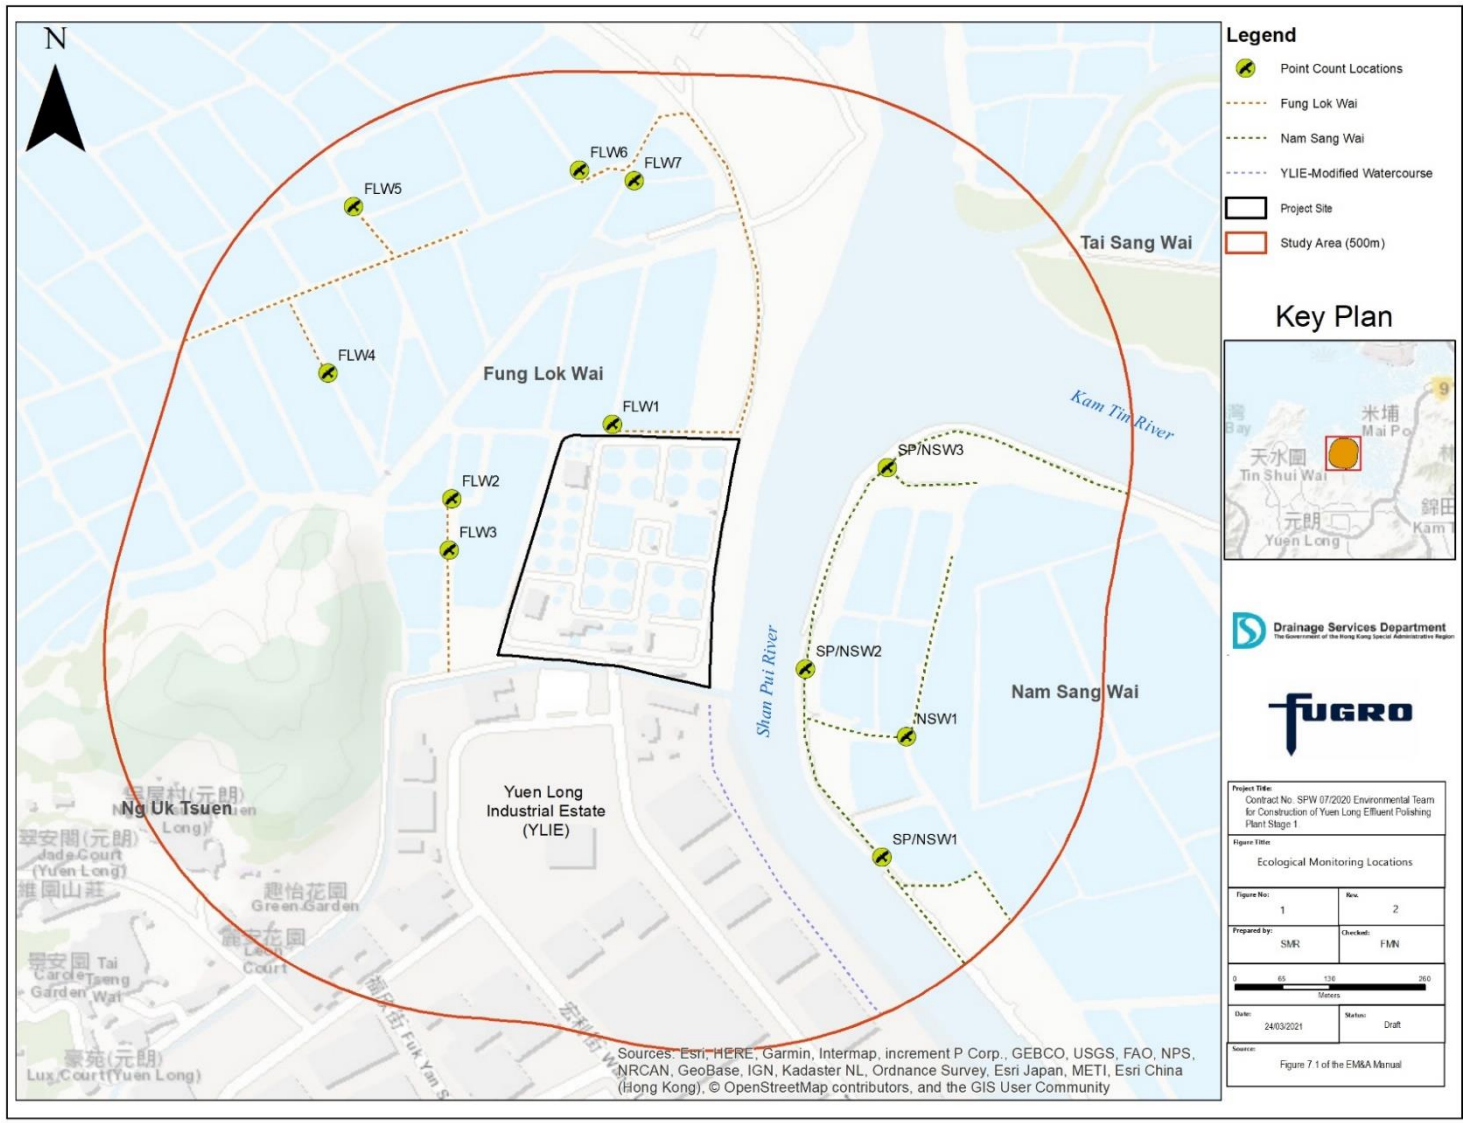
O.2.3 Indicator of Presence of Night Roosts

Appendix O.2.3a: Bird droppings on leaf litter and roots within the vicinity of the mangrove strip east of the Project boundary observed on 16 April 2021 around 18:05

Appendix O.2.3b: Bird droppings on leaf surfaces of the mangrove *Sonneratia apetala* and Spiny Bears Breech *Acanthus ilicifolius* located east of the Project boundary observed on 16 April 2021 around 18:05

Appendix P

Ecological Bird Monitoring Area with Locations of Point Count Sites and Transect Routes



Appendix P: Ecological bird monitoring area with the locations of point count sites and transect routes

Appendix Q

Notification of Exceedance

Notification of Water Quality Monitoring Exceedance

Incident Report on Action/ Limit Level Exceedance

Reference No.:	IR20210413_M3_SS
Project:	Contract No. SPW 07/2020 Environmental Team for Construction of Yuen Long Effluent Polishing Plant Stage 1
Date:	2021/04/13
Time: (hh:mm)	M1: M2: M3: 9:00 (Flood Tide)

Action level / Limit level:		DO (mg/L)		Turbidity (NTU)		SS (mg/L)	
		AL	LL	AL	LL	AL	LL
	M1	2.25	1.91	48.4	50.4	59.0	68.0
	M2	1.88	1.79	43.0	52.4	81.0	112.0
	M3	3.28	3.14	74.3	78.0	104.0	167.0

Measured level of exceeded parameter: (fill in / circle as appropriate)				
M1	DO (AL / LL) : _____	M3	DO (AL / LL) : _____	
	NTU (AL / LL) : _____		NTU (AL / LL) : _____	
	SS (AL / LL) : _____		SS (AL / ~~LL~~) : 125	
M2	DO (AL / LL) : _____			
	NTU (AL / LL) : _____			
	SS (AL / LL) : _____			

Action taken / to be taken: (tick / circle / fill in as appropriate)	Inspection : ☑ER / IEC / Contractor is/are informed. ☑ Monitoring equipment & monitoring data are checked and confirmed without problem. ☐ In-situ measurement is repeated. ☐ Other _____ _____ _____

Possible reason for action or Limit level Non-compliance: (tick / fill in as appropriate)	DO	Turbidity	SS
	Finding / Evidences		
☐ Upstream Control Station exceeded AL/LL			
☐ Station was polluted by the inflow of other construction site			
☐ Station was polluted by the inflow of residential discharge			
☐Station was polluted by the inflow of surface runoff from rainstorm and storm water drainage			
☑ No construction activities were carried out in the vicinity of station			M3
☐ Other _____ _____

Remark

1. Orange and Bold: Action Level Exceedance
2. Red and Bold: Limit Level Exceedance
3. Action Level for Turbidity: 95%-ile of baseline data or 120% of upstream control station's turbidity recorded on the same day.
4. Limti Level for Turbidity: 99%-ile of baseline data or 130% of upstream control station's turbidity recorded on the same day.
5. Action Level for SS: 95%-ile of baseline data or 120% of upstream control station's SS recorded on the same day.
6. Limti Level for SS: 99%-ile of baseline data or 130% of upstream control station's SS recorded on the same day.

Monitoring Location	DO		NTU		SS	
	AL	LL	AL	LL	AL	LL
M1	2.25	1.91	48.4	50.4	59.0	68.0
M2	1.88	1.79	43.0	52.4	81.0	112.0
M3	3.28	3.14	74.3	78.0	104.0	167.0

Annex C – Photo of investigation

Date of investigation: 13 April 2021 (Flood Tide)
Monitoring Station: M3

Annex D – Site Inspection

Date of site inspection: 7 April 2021
Gullies were covered by geotextiles and bunded to prevent surface runoff.

Date of site inspection: 21 April 2021
The drainages near the construction site areas were temporarily sealed.
